BUILDING CONSTRUCTION PERMIT FEE AND ZONING APPLICATION FEE SCHEDULE

2015

Where the permit fee is listed as "SF x Multiplier x Valuation", the permit fee shall be determined by multiplying the project area in square feet times the permit fee multiplier times the project valuation. For all other scopes of work and for administrative and application fees the flat sum fee shall be applied.

Legend:

SF: For new construction, the "SF" is the aggregate gross floor area included within surrounding exterior walls and/or within the horizontal projection of the roof or floor above. For additions and alterations, the "SF" is the aggregate gross floor area within perimeter walls of work areas.

Multiplier: The permit fee multiplier ("Multiplier") is used to determine the cost of providing permitting and construction related inspection services for a given project. The cost of providing services is determined by multiplying this factor times the project area and the project valuation.

Valuation: The cost/square foot at the time of permit application to construct a building or structure, including additions or alterations thereto, or the installation or modification of any building component or operating system. The cost of land is not included within the project valuation. The valuation is determined by selecting the construction cost per square foot as listed in the attached chart for the given construction type and Use Group. For building or structure uses not specifically listed, the Use Group and/or construction cost shall be determined by the Building Official.
