

2018 TRUCK REBUILD NOTES

2017 New single axle truck build cost \$92,698.00, this did include salter. We are re plumbing our current salting units on our tandem axle trucks.

We budgeted \$190,000.00 per truck for replacement

We are proposing spending \$272,952.00 for all three units, \$90,984.00 per unit.

This project will provide uniformity of equipment with the newest purchases.

Each truck has approximately 35,000 miles, so we may double the life of these vehicles.

One truck is receiving a new plow to match the newest purchased plows.

The new dump bodies are stainless steel and should give us many more years of productive use.

PB is the parent company of Duraclass, the truck bodies on our newest truck builds.
