RE: Phase I Environmental Site Assessment
7 Van Buren Street / 404 South Austin Boulevard
Oak Park, Illinois
AGI Project No. 21-285

Dear Mr. Lovell:

Enclosed please find the results of a Phase I Environmental Site Assessment (Phase I ESA) for the above referenced property. It was performed following the Standard Practice for Environmental Site Assessments E1527-13 developed by the American Society for Testing and Materials (ASTM), which incorporates the USEPA's All Appropriate Inquiry (AAI) rules.

This Phase I consisted of (1) a visual inspection of the property, and the exterior of adjacent properties, (2) a review of available and appropriate federal, state, and local environmental databases, (3) a review of available historical records, and (4) interviews with persons knowledgeable about the property. The visual inspection and the environmental database review covered the property, adjacent properties, and surrounding facilities.

Applied GeoScience, Inc. greatly appreciates this opportunity to assist you with your environmental needs.

Sincerely,

APPLIED GEOSCIENCE, INC.

Kathleen N. Larsen
Project Manager

1.0 EXECUTIVE SUMMARY

Applied GeoScience, Inc. (AGI) has performed a Phase I Environmental Site Assessment (Phase I ESA) for Mr. Jack Lovell of Oak Park Residence Corporation for the property located at 7 Van Buren Street in Oak Park, Cook County, Illinois, hereafter referred to as the “property.”

The purpose of this investigation was to conduct “all appropriate inquiry” into the previous ownership and uses of the property consistent with good commercial or customary practice as defined by the CERCLA liability and defense provisions at 42 U.S.C Sec. 9601(35)(B). This investigation was also intended to investigate the property for the presence of recognized environmental conditions (see Section 14, Definitions), hazardous substances or petroleum materials that may have impacted the property. Another objective of this Phase I ESA was to determine if the aforementioned hazardous substances or petroleum products originated on the property or potentially migrated onto the property from surrounding properties.

This Phase I ESA consisted of (1) a visual inspection of the property and the exterior of adjacent properties, (2) a review of available and appropriate federal, state, and local environmental databases, (3) a review of available historical records, and (4) interviews with persons knowledgeable about the property. The visual inspection and the environmental database review covered the property, adjacent properties, and surrounding facilities.

AGI identified no Recognized Environmental Conditions, no Controlled Recognized Environmental Conditions, no Historical Recognized Environmental Conditions, no *de minimis* conditions, and two (2) notable findings through the performance of this investigation, as summarized in the table below:

Notable Findings - Summary Table			
Address	Notes	Distance from Property (ft)	Direction from Property
7 West Van Buren Street	Possible presence of lead based paint (LBP)	0	Property
7 West Van Buren Street	Suspect asbestos containing building material (ACBM)	0	Property

This Executive Summary should be read in conjunction with the body of this report and should not be considered a comprehensive evaluation of property conditions. See Sections 8.0 and 9.0 of this report for our conclusions and recommendations.

2.0 INTRODUCTION

2.1 Purpose

The purpose of conducting a Phase I Environmental Site Assessment (Phase I ESA) by ASTM Standard E1527-13 on a parcel of commercial real estate is to permit a user to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on liability as described in the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980: that is, the practices that constitute “all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice as defined in 42 USC 9601(35)(B).”

Section 101 (35)(A)(1) of CERCLA indirectly defines an Innocent Landowner by stating that the affected party(ies) must show they *"did not know and had no reason to know that any hazardous substance was disposed on, in, or at the facility"*. In order to establish that the affected party had no reason to know, it is necessary to undertake an inquiry consistent with good and customary practice to address commonly known or reasonably ascertainable information about the property, the obviousness of the presence or likely presence of contamination at the property, and the ability to detect such contamination by appropriate inspection.

To obtain an understanding of the Phase I ESA process, the reader is urged to refer to the applicable ASTM Standard E1527-13. This document is available from the American Society of Testing and Materials, 1916 Race Street, Philadelphia, PA, 19013, or through the ASTM Website.

Additionally, an evaluation of *business environmental risk* associated with a parcel of commercial real estate may necessitate investigation beyond that identified in the ASTM E1527-13 standard.

2.2 Detailed Scope-Of-Services

The scope-of-services for this investigation included the performance of a Phase I ESA consistent with the requirements ASTM, which includes AAI requirements. In addition, AGI performed a limited visual survey for asbestos and lead-based paint. Additional tasks performed by AGI are listed in Section 10.0.

2.3 Significant Assumptions

All findings in this report are based on visual observations, interviews, historical data, and pertinent government and private records. The information contained in this report is limited to those *reasonably ascertainable* and *practically reviewable* resources available to us at the time of the assessment and our visual observations of the property. Our findings are not to be considered scientific certainties but are intended to identify environmental concerns, which would be apparent to skilled, knowledgeable professional applying accepted standards.

This Phase I ESA is not intended to represent an exhaustive or in depth investigation of hazards which may exist on the property but rather a review of current practices and a compilation of relevant federal and state databases.

2.4 Limitations and Exceptions

The Phase I ESA detailed in this report has been performed in accordance with generally accepted methods and practices of the environmental engineering profession. The scope and depth of this study are as directed, and as agreed to, by the User.

In the preparation of this report, AGI has used experienced and trained environmental professionals in our effort to locate and identify hazardous materials or conditions. We do not warrant that all such materials have been identified either visually or through State and Federal record review. It is possible that some materials containing a hazardous substance were not reasonably visible or accessible to our environmental professional.

2.5 Special Terms and Conditions

Potential buyers and lending institutions with a financial interest in the property often require that the scope of the investigation be extended to minimize potential regulatory or financial concerns that exceed the scope of the ASTM Standard. Section 10.0 of this report details the scope-of-services agreed to for this Phase I ESA.

2.6 User Reliance

AGI has prepared this report for the exclusive use of the User. The information contained in this report shall not, in whole or part, be disseminated to any other party, nor be used by any other party without prior written consent. Any activities, which occur subsequent to this report, resulting in adverse environmental impact, are not relevant to this study.

3.0 PROPERTY DESCRIPTION

3.1 Location Description

The property is located at 7 Van Buren Street in Village of Oak Park, Cook County, Illinois, but it should be noted that the Cook County Assessor lists the property address as 404 South Austin Boulevard. The property boundary is depicted in the Property Diagram in Appendix A. It is situated in the Northeast Quarter of Section 17 in Township 39 North, Range 13 East of the Third Principal Meridian, as identified on the United States Geological Survey (USGS) 7.5-Minute Map of the Berwyn Quadrangle, dated 2021 (see Appendix A). The property Identification Number (PIN) associated with the property is 16-17-131-013-0000 and a Cook County Assessor PIN map can be found in Appendix A.

3.2 Property and Vicinity General Characteristics

The property is developed with a two-story building of brick and mortar construction with a basement. An asphalt paved parking lot is present along the western and southern sides of the building. According to the Owner the property was first developed with the existing building in 1959, and Sanborn fire insurance maps depict a construction date of 1960.

Observations of the property grounds were conducted to check for evidence of dumping, chemical spills, chemical/petroleum storage, or other potential sources of contamination. No stained soils or signs of stressed vegetation, unusual or noxious odors, wastewater treatment systems, dumping, or toxic substances were observed.

3.3 Current Uses of the Property

The property is currently vacant but was most recently used as 12-unit multi-family residential building.

3.4 Descriptions of Property Structures, Roads, and Other Improvements

The property is developed with a two-story building of concrete masonry unit (CMU) and mortar construction with a tar paper roof. Asphalt paved parking lots cover the western and southern portions of the property and appeared to be in good condition at the time of AGI's inspection. A public alley runs along the western property boundary and a driveway with additional parking spaces is present to the north. Typical finishes in the apartment units included carpeting, wood or vinyl flooring, 12"x12" ceramic floor tile, 9"x9" floor tile in the basement, unfinished concrete floors

and walls in the basement mechanical room, drywall, 6"x6" ceramic wall tile, acoustic ceiling tiles, and caulk around doors and windows, including glass block windows in the restrooms. A mechanical room was located in the basement that contained water heaters and furnaces, as well as a sump pit.

Property photographs can be found in Appendix B.

3.5 Current Uses of Adjacent Properties

Listed below is information relating to sites bordering the property and within the immediate vicinity (see maps in Appendix A).

NORTH: West Van Buren Street, followed by multi-family residential building

EAST: South Austin Boulevard, followed by Columbus Park golf course

SOUTH: Multi-family residential building

WEST: Public alley, followed by single family residences

AGI's visual inspection and information search found no obvious evidence of environmentally adverse conditions such as waste dumping, underground storage tanks, outdoor storage of chemicals or petroleum product, stained soils, chemical spills, air emissions, or excessive groundwater runoff originating from the adjacent sites.

4.0 PROPERTY RECONNAISSANCE

4.1 Property Visit Methodology and Limiting Conditions

Mr. Adam Moghamis of AGI performed a property inspection under Ms. Kathleen Larsen's direction on August 16, 2021. AGI was accompanied by the property manager, Mr. Freddy Sanchez, during this property inspection. At the time of AGI's visit, the weather was clear and 80°F. A systematic walk-through was conducted to enable AGI to observe the entire property. No limiting conditions were noted. Copies of the property photographs are presented in Appendix B.

4.2 Property Topography and Surface Features

The property topography exhibited a generally level grade. Stormwater at the property is expected to flow into storm sewers located on the property and along nearby roadways.

4.3 Utilities

Natural gas to the property would be provided by People's Gas, electricity is provided by Commonwealth Edison (ComEd), and water and sewer services are provided by Village of Oak Park, which sources its water from Lake Michigan.

4.4 Underground Storage Tanks

The property was visually inspected for evidence of underground storage tanks (USTs), such as vent pipes, fill ports, patched pavement, pump islands, etc. No evidence of USTs were observed on the property during AGI's inspection.

4.5 Aboveground Storage Tanks

The property was visually inspected for the presence of Aboveground Storage Tanks (ASTs) and no evidence of ASTs was observed.

4.6 Chemical Usage and Storage

The property is currently vacant, and no significant chemical usage or storage was observed at the time of AGI's inspection.

4.7 Chemical Waste Generation, Handling, and Disposal

The property is vacant, and no chemical waste generation, handling, or disposal was observed at

the time of AGI's inspection.

4.8 Solid Waste Generation, Handling, and Disposal

The property was vacant at the time of AGI's inspection, and no significant solid waste generation, handling, or disposal was observed at the property.

4.9 PCB Containing Equipment

Polychlorinated biphenyls (PCBs) were historically utilized in a variety of products, including hydraulic oils, light ballasts, and dielectric fluids found in electrical transformers. The Toxic Substance Control Act (TSCA) of 1980 strictly controls PCBs. Though banned from U.S. production in 1970, PCBs were previously incorporated into transformer and switchgear oil as insulators and may also occur in hydraulic and recycled lubricating oils. It is extremely unlikely that any electrical power utilities still use PCB containing devices. Most of these utilities discontinued the use of PCB in transformers in the mid 1980's.

No potentially PCB-containing equipment – including hydraulic lifts, hydraulic trash compactors, or hydraulic elevators – was observed on the property at the time of AGI's inspection.

4.10 Water Wells and Septic Systems

According to the Owner, there is a sump pump pit in the basement. No evidence of former or current septic systems or potable water wells was observed at the property. A detailed summary of well records can be found in the EDR report in Appendix D.

4.11 Heating/Cooling Systems

The building is heated with natural-gas and electric powered furnaces and is cooled with individual window-mounted air conditioning units.

4.12 Unusual or Noxious Odors

No unusual or noxious odors were noted during the property inspection.

4.13 Stressed Vegetation

No stressed vegetation was observed at the time of AGI's inspection.

4.14 Non-ASTM Consideration: Asbestos-Containing Materials

The USEPA banned asbestos insulation in building construction in the late 1970s. According to the USEPA, an Asbestos Containing Building Material (ACBM) is one that contains more than 1% asbestos by total weight. The presence of ACBM does not necessarily mean the occupants are at a greater health risk. If the ACBM remains in good condition and is not likely to be disturbed, the probability of building occupants experiencing an asbestos-related adverse health effect is very low. When ACBM is damaged or removed, asbestos fibers may be released, thereby increasing the risk of exposure.

AGI conducted a limited visual survey for suspect asbestos containing building materials (ACBMs) at the property. Suspect asbestos containing building materials observed throughout the building included 9"x9" floor tile and associated mastic, mastic associated with ceramic floor tile in the restrooms, drywall tape and joint compound, thermal system insulation (TSI), and caulk on window panes, doors, and glass block windows.

Prior to demolition or remodeling, inspection and testing of any suspect ACBMs should be performed by an Illinois Department of Public Health (IDPH)-licensed Asbestos inspector in accordance with all applicable regulations and confirmed ACBM should be removed by an IDPH licensed asbestos abatement contractor in accordance with applicable regulations.

4.15 Non-ASTM Consideration: Lead-Based Paint

Lead is a highly toxic metal that may cause a range of health problems, especially in young children. When lead is absorbed into the body, it can cause damage to the brain and other vital organs, like the kidneys, nerves, and blood. Lead based paint (LBP) was banned in the United States in 1978.

Due to the pre-1978 construction date of the site building (1960) it is possible that LBP is present in the building. All painted areas appeared to be in good condition at the time of AGI's inspection. Prior to renovation or demolition, inspection and testing of any suspect LBP materials should be performed by an Illinois Department of Public Health (IDPH) licensed Lead Inspector/Risk Assessor in accordance with all applicable regulations.

5.0 USER PROVIDED INFORMATION

5.1 Title Records

The ASTM Standard states that the User review reasonably ascertainable recorded land title records. The User did not provide a chain of title search for AGI's review and a chain of title search was not included in the scope-of-work for this Phase I ESA.

5.2 Environmental Liens or Activity and Use Limitations

The ASTM Standard states that the User should attempt to identify any environmental liens or activity and use limitations (AULs), if any that are currently recorded against the property through a review of reasonably ascertainable recorded records.

The User was not aware of any environmental liens or activity or other use limitations, past or current, encumbering the property. A search of title records for environmental liens or AULs was not included in the scope-of-work for this Phase I ESA.

5.3 Specialized Knowledge

The ASTM Standard indicates that, if the User is aware of any specialized knowledge or experience that is material to recognized environmental conditions in connection with the property, it is the user's responsibility to communicate any information based on such specialized knowledge or experience to AGI. The User did not report to AGI any specialized knowledge or experience material to identifying recognized environmental conditions at the property.

5.4 Commonly Known or Reasonably Ascertainable Knowledge

The ASTM Standard requires that, if the User is aware of any commonly known or reasonably ascertainable information within the local community about the property that is material to recognized environmental conditions in connection with the property, it is the User's responsibility to communicate such information to the environmental professional. The User was not aware of any specific chemicals, chemical spills, or environmental cleanups at the property.

5.5 Valuation Reduction for Environmental Issues

According to the ASTM Standard, in a transaction involving the purchase of a parcel of commercial real estate, if a User has actual knowledge that the purchase price of the property is significantly

less than the purchase price of comparable properties, the User should try to identify an explanation for the lower price and to make a written record of such explanation. The User indicated that the purchase price for the property reflects a fair market value and was not aware of any valuation reduction related to environmental issues.

5.6 Owner, Property Manager, and Occupant Information

The property is owned by Oak Park Residence Corporation and the property is currently vacant. Mr. Jack Lovell, the Owner and User, completed Owner and User Questionnaires prepared by AGI, which can be found in Appendix G, and provided general information about the subject property as discussed throughout this report.

5.7 Reason for Performing Phase I ESA

The ASTM Standard indicates that the User should make known to the environmental professional the reason why the User wants to have the Phase I ESA performed, or if the User does not identify the purpose of the Phase I ESA, AGI should assume that the purpose is to qualify for the innocent landowner defense to CERCLA liability.

According to the User, the Phase I ESA is being performed to identify asbestos or lead contamination as well as other recognized environmental conditions prior to the demolition of the property building and redevelopment into a 6-story, 45-unit apartment building.

5.8 Other

No additional information related to potential recognized environmental conditions was provided by the User.

6.0 RECORDS REVIEW

6.1 Physical Setting Sources

6.1.1 Soil Survey

According to the USDA National Cooperative Soil Survey (USDA-NCSS) and the Soil Survey Geographic Database (SSURGO,) the subject property soil primarily consists of Urban land. Urban land is considered not prime farmland. Information obtained from the USDA web soil survey can be found in the EDR report in Appendix D.

6.1.2 Area Geology

According to the EDR report, the area geology consists of a rock stratigraphic unit dating from the Paleozoic era, in the Silurian system and Middle Silurian (Niagoaran) series, with Era, System, and Series code S2. The full EDR report can be found in Appendix D.

6.1.3 Area Topography

The subject property and immediate vicinity are situated in a level area at an approximate elevation of 614 feet above mean sea level based on National Geodetic Vertical Datum (NGVD). Property observations indicate that storm water on the property is expected to infiltrate into the surface of the property and into the storm drains located along the asphalt paved lot and adjacent roadways. Topographic maps can be found in Appendix A, and a more detailed discussion of historical topographic maps available for the property can be found in Section 6.3.3.

6.1.4 Estimated Groundwater Flow Direction

The estimated regional groundwater flow direction is to the east toward the Chicago River, which is located approximately 4 miles east of the subject property. Groundwater flow direction is estimated based on a review of the USGS topographic map. Property-specific conditions may be impacted by a variety of factors including but not limited to geologic anomalies, utilities, drainage systems, or sumps. According to the EDR report, three wells are located within ¼ - mile of the property. The wells are finished at depths between 78 and 1705 feet below ground surface and are owned by Public Service Co. of Northern Illinois. Specific groundwater flow information would require an extensive groundwater investigation, which was beyond the scope of this Phase I Environmental Assessment.

6.1.5 Available Property-Specific Physical Data

No additional property-specific physical data was available for AGI's review.

6.2 Standard Environmental Record Sources

This Phase I ESA has included a search of public records and databases provided by State and Federal Regulatory Agencies in order to determine the regulatory status of the property as well as other properties within the immediate vicinity. The search distance for regulated properties has been followed according to the ASTM Standard Practice for Environmental Site Assessments (E1527-13).

Environmental Data Resources (EDR) was retained by AGI to perform an environmental databases search. To remain current with federal and state databases, EDR contacts the appropriate agency on a monthly or quarterly basis, as required. Elapsed ASTM days noted in the EDR report provided confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM Standard. A copy of the EDR report is provided in Appendix D.

The following table details the databases included in the EDR database search and their respective approximate minimum search distances. A discussion follows of those databases for which AGI identified listings within the ASTM-specified approximate minimum search distance from the property. Additional details regarding the individual databases are provided in the EDR database report in Appendix D.

Database Search Summary Table			
Database	Database Full Name	Approximate Minimum Search Distance	Listings Within Approx. Min. Search Distance of the property

EDR CLEANERS	EDR Historical Cleaners	0.25 Miles	1

6.2.1 CORRACTS

The CORRACTS database identifies hazardous waste handlers with RCRA corrective action activity. This report shows which nationally-defined corrective action core events have occurred for

every handler that has had corrective action activity.

The subject property and adjacent sites are not listed in the CORRACTS database; however, three (3) listings were identified within the approximate minimum search distance of 1.0 mile. All three sites are located at distances of over 0.5 miles from the subject property and are not considered Recognized Environmental Conditions (RECs).

6.2.2 LUST

Leaking Underground Storage Tank Incident Reports (LUST) is maintained in an Illinois Environmental Protection Agency (IEPA) state database of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored in this database varies by state. Information for the state of Illinois is obtained from the Illinois Office of the State Fire Marshal (OSFM).

The property and adjacent sites were not identified in the LUST database; however, eleven (11) sites were identified within the minimum search distance of 0.5-mile.

The nearest LUST listing is BP Shop, located approximately 0.1 mile south of the property at 520 South Austin Boulevard. The facility received a No Further Remediation (NFR) letter on August 15, 2003 for two incidents, a gasoline release on March 22, 1991 (Incident Number 910747) and a second gasoline release on May 17, 1989 (Incident Number 890797). Based on its NFR status and distance from the subject property, this site is not considered a REC.

The remaining ten (10) listings are located at greater distances from the property, and six of the ten listings have received No Further Remediation (NFR) Letters. Based on the distance from the property and/or NFR status, the LUST incidents at these facilities are not considered RECs.

6.2.3 SRP

The Site Remediation Program (SRP) database identifies the status of all voluntary remediation projects administered through the pre-notice site cleanup program (1989 to 1995) and the site remediation program (1996 to the present).

The property and adjacent sites are not listed in the SRP database; however, fifty-three (53) listings were identified within the approximate minimum search distance of 0.5 miles.

Forty-nine of the fifty-three listings are named “ComEd Barrie Pk Residential”, are located between 0.3 to 0.45 miles southwest of the subject property, and have received NFR letters. The nearest listing to the subject property is Harrison Street Ventures LLC and is located approximately 0.27 miles to the west at 201-211 Harrison Street. The site was enrolled in the program in 2019 and is still active. Based on their distance and/or NFR status, these sites are not considered Recognized Environmental Conditions (RECs).

6.2.4 EDR MGP

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR’s researchers. Manufactured gas sites were used in the United States from the 1800’s to 1950’s to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

The subject property and adjacent sites were not identified in the MGP database; however one listing was identified within the approximate minimum search distance of 1.0 mile. North Western Gas Light and Coke Co. is listed at 1001 South Taylor Avenue, approximately 0.3 miles southwest of the subject property. No further information is provided in the EDR report. Based on its distance, this facility is not considered a REC.

6.2.5 EDR HISTORICAL AUTO

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR’s review was limited to those categories of sources that might, in EDR’s opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. The EDR Exclusive Historical Auto Stations database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR’s HRHR

effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns but may not show up in current government records searches.

The property and adjacent sites are not listed in the EDR AUTO database; however, two (2) listings were identified within the approximate minimum search distance of 0.125 miles. Based on the nature of the listings and their distance from the property, they are not considered Recognized Environmental Conditions (RECs).

6.2.6 EDR HISTORICAL DRYCLEANER

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns but may not show up in current government records searches.

The property and adjacent sites are not listed in the EDR HISTORICAL DRYCLEANER database; however, one (1) listing was identified within the approximate minimum search distance of 0.125 miles. Western Wet Wash Laundry Co. is listed at "337 North Austin Avenue" in 1923, however this address is located 4 miles from the property. 337 South Austin Boulevard is located approximately 0.05 miles north of the property, corresponding with the distance listed on the EDR report, and is more likely the correct address for this listing, although it is currently a residence. Based on its distance from the subject property and the nature of this listing, it is not considered a REC.

6.3 Historical Use Information

A limited historical investigation of the property and the immediate vicinity was performed in accordance with the ASTM Standard Practice for Environmental Site Assessments E1527-13, in order to identify previous operations that may affect environmental conditions on the property.

For historical information, AGI attempted to contact the Owner's representative and local agencies. AGI personnel further attempted to investigate the history of the property through various sources as described below.

6.3.1 Historical Fire Insurance Maps

Documents such as Sanborn Fire Insurance Maps contain information relating to structures and business activities in a specific geographic area. Sanborn maps were created for insurance underwriters and often contain information regarding the uses of individual structures and the locations of fuel and/or chemical storage tanks that may have been on a particular property situated in urban areas. These maps are periodically updated or revised and, therefore, they indicate chronicle changes in these structures and business activities over time. Typically, areas that do not have Sanborn Map coverage were historically undeveloped or non-urban areas.

Sanborn maps for the years 1908, 1947, 1950, 1975, 1988, 1991, 1993, 2002, and 2004 were provided by EDR. The Sanborn maps provided by EDR can be found in Appendix C.

Sanborn Maps - Property	
Date	Description
1908	A two-story dwelling is present on the southern portion of the property.
1947 1950	A detached garage has been constructed at the southwest corner of the property.
1975	The existing 12 unit apartment building has been constructed, and according to the map was built in 1960. The map indicates that the building is provided with fire protection, is of concrete block and brick construction, has a basement in one portion of the building, and a concrete floor slab in the remaining portions.

Sanborn Maps – Surrounding Sites	
Date	Description
1908	The areas to the east of Austin Boulevard and to the north of Van Buren Street are undeveloped, and dwellings are present at the west and south adjacent sites.
1947 1950 1975	A larger 3-story flat has been constructed at the south adjacent site, and a large flat complex has been constructed at the north adjacent site across Van Buren Street. The east adjacent site is not shown on the 1947 map, but is still undeveloped in the 1950 and 1975 maps. No significant changes were observed to the remaining surrounding sites.
1988 1991 1993 2002 2004	Only the east adjacent site is shown on these maps, and it is still undeveloped.

No Recognized Environmental Conditions (RECs) were identified during AGI's review of the Sanborn maps available for the property. Due to the construction date of the property building and the "fire protected" note on the Sanborn map, asbestos-containing building materials (ACBMs) may be present.

6.3.2 Historical Aerial Photographs

Aerial photographs document geologic conditions and land use for a property. They are periodically updated and, therefore, can provide a historical record of a specific geographic area. Public domain aerial photographs of the property and surrounding area were examined to identify visual changes over time to the property.

Aerial photographs were obtained from www.historicaerials.com for the years 1938, 1951, 1962, 1963, 1972, 1981, 1983, 1988, 1999, 2002, 2005, 2007, 2009, 2011, 2012, 2014, 2015, and 2017. Select copies of these aerial photographs are provided in Appendix A.

Historical Aerial Photographs – Subject Property	
Date	Description
1938 1951	The property is vacant.
1962 1963 1972 1981 1983 1988 1999 2002 2005 2007 2009 2010 2011 2012 2014 2015 2017	The property building has been constructed and appears to be in the same configuration as observed during AGI’s property inspection.

Historical Aerial Photographs – Surrounding Sites	
Date	Description
1938 1951	A large apartment complex is present at the north adjacent site. The south adjacent site is developed with a large building and the west adjacent sites appear to be developed with single-family homes. The east adjacent site is undeveloped except for what appears to be a walking path.
1962 1963 1972 1981 1983 1988 1999 2002 2005 2007 2009 2010 2011 2012 2014 2015 2017	The path at the east adjacent park is no longer visible. No significant changes were observed to the remaining surrounding sites.

No evidence of recognized environmental conditions was identified through AGI's review of historical aerial photographs.

6.3.3 Historical Topographic Maps

Topographic maps document geologic conditions and land use for a property. Topographic maps were obtained from www.historicaerials.com for the years 1891, 1893, 1900, 1901, 1905, 1911, 1920, 1928, 1933, 1945, 1956, 1965, 1973, 1981, 1993, 2002, 2012, 2015, and 2018.

Copies of select topographic maps are provided in Appendix A.

Historical Topographic Maps – Subject Property	
Date	Description
1891 1893 1900 1901 1905 1911 1920	No improvements are shown on the property.
1928 1933 1945	Red dots indicating sand, glacial moraine, or wash are present on the property. A thick black line possibly indicating a row of buildings is present on the property and extending south along South Austin Boulevard.

Historical Topographic Maps – Subject Property	
Date	Description
1956 1965 1973 1981 1993 1999 2002	The map format has changed and structures are no longer shown.
2012 2015 2018	The map format has changed and only streets are visible.

Historical Topographic Maps – Surrounding Sites	
Date	Description
1891 1893	No improvements are shown on the surrounding sites.
1900 1901 1905 1911 1920	West Van Buren Street and South Austin Boulevard have been constructed. One structure is shown further to the southeast of the subject property.
1928 1933 1945	Additional roadways have been constructed, as well as a winding roadway or path further to the east. A thick black line possibly indicating a row of buildings is present along South Austin Boulevard. The east adjacent site is now Columbus Park. Red dots indicating sand, glacial moraine, or wash and uneven topography are shown to the east, north, and south.
1956	The map format has changed and buildings are no longer shown.
1965 1973 1981 1993 1999 2002	The path or roadway to the east is no longer present, and green and white patches indicating a park or golf course are present.
2012 2015 2018	The map format has changed and only streets are visible.

The review of historical topographic maps confirms the observations from the aerial photographs. Small raised areas to the east at Columbus Park are no longer present, but no other significant topographical changes were noted and no RECs were identified through AGI's review of historical topographic maps.

6.3.4 Previous Environmental Reports

No previous environmental reports were provided by the User for AGI's review.

6.3.5 Historical City Directories Review

Historical city directories are used to track occupants of a given site address over time. EDR provided historical city directories published for the property area between 1969 and 2017. All listings in the vicinity of the subject property are private residences, except for Ascension church and school. The city directory records confirmed the surrounding land use observed during AGI's visit. No recognized environmental conditions were identified through AGI's review of city directory records. A copy of the City Directory Image Report by EDR can be found in Appendix E.

6.4 Summary of Property History

Historical property usage information was obtained through AGI's review of Sanborn maps, historical aerial photographs, city directory records, and information provided by the User. The property appears to have been vacant until its development with the existing apartment building in 1960.

6.5 Summary of Adjacent Property Usage

Based on historical aerial photographs and city directory records, the surrounding properties have been historically utilized for residential purposes and Columbus Park.

6.6 Local Agency Records Review

6.6.1 Cook County Assessor's Office

AGI submitted a Freedom of Information Act (FOIA) request to the Cook County Assessor's Office for information regarding petroleum storage tanks, hazardous spills, or other environmental concerns at the property. No response was received from the Cook County Assessor's Office prior to the completion of this report. Any information received which affects the findings and conclusions of this report will be forwarded to the User as an addendum.

6.6.2 Cook County Clerk

AGI submitted a FOIA request to the Cook County Clerk for information of an environmental nature regarding the property. A response was received on August 23, 2021 stating that the County Clerk's office does not maintain the documents requested.

6.6.3 Illinois Environmental Protection Agency

AGI submitted a FOIA request to the IEPA for information of an environmental nature, including reported releases, complaints, and storage tank installation or removal activity at the property. No

response was received from the IEPA prior to the completion of this report. Any information received which affects the findings and conclusions of this report will be forwarded to the User as an addendum.

6.6.4 Illinois Office of the State Fire Marshal

AGI submitted a FOIA request to the Illinois OSFM for information on registered USTs at the subject property. A response was received on August 23, 2021 stating that no records were available for the subject property.

6.6.5 Village of Oak Park

AGI submitted a FOIA request to the Village of Oak Park for information regarding petroleum storage tanks, hazardous spills, or other environmental concerns at the property. A response was received on August 27, 2021 stating that the Fire Department has no records of underground storage tanks at the subject property.

Copies of FOIA requests and responses are provided in Appendix F.

7.0 INTERVIEWS

As warranted, interviews were conducted with individuals who may have knowledge of specific issues pertaining to the property.

7.1 Interview with Owner

The Owner, Mr. Jack Lovell of Oak Park Residence Corporation completed an Owner Questionnaire for the subject property. Mr. Lovell has been the Owner since 2004 and provided general information about the property which can be found throughout this report. It should be noted that he provided a construction date of 1959 for the property building, but that Sanborn maps show a construction date of 1960.

7.2 Interview with Property Manager

AGI was accompanied by Mr. Freddy Sanchez, the subject property manager, during the property inspection. The representative provided general information about the property which can be found throughout this report.

7.3 Interviews with Occupants

The property is currently vacant; therefore no occupants were available for interview.

7.4 Interviews with Local Government Officials

AGI submitted FOIA requests to the Village of Oak Park, Cook County, the Illinois Environmental Protection Agency (IEPA), and Illinois Office of the State Fire Marshal (OSFM). Information obtained from these sources is discussed in Section 6.6.

7.5 Interviews with Others

No other interviews were conducted in conjunction with this Phase I ESA.

8.0 FINDINGS AND CONCLUSIONS

Per the ASTM E 1527-13 Standard, this section lists AGI's findings of recognized environmental conditions, controlled recognized environmental conditions, historical recognized environmental conditions, and *de minimis* conditions at the property based on the results of this Phase I ESA investigation.

The ASTM Standard requires that AGI provide an opinion of each finding's impact on the property. Therefore, this section provides AGI's opinion and conclusion regarding the impact on the property of all recognized environmental conditions, controlled recognized environmental conditions, historical recognized environmental conditions, and *de minimis* conditions identified in this report.

This section also provides a discussion of issues with significant data gaps, if any, that were identified as part of this assessment. A data gap is defined as "*a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information*" and is only significant if other information and/or professional experience raises reasonable concerns involving the data gap.

No data gaps were encountered through the performance of this Phase I ESA.

8.1 Recognized Environmental Conditions

A recognized environmental condition is defined in ASTM E 1527-13 as "*the presence or likely presence of any hazardous substance or petroleum products in, on, or at a property; (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment*" (see Section 14, Definitions).

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 of the property located at 7 West Van Buren Street, Oak Park, Cook County, Illinois. Any exceptions to, or deletions from, this practice are described in Section 10.0 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property.

8.2 Controlled Recognized Environmental Conditions

The ASTM E 1527-13 defines a controlled recognized environmental condition as “*a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority,) with hazardous substances or petroleum products allowed to remain in place subject to the implementation or required controls*” (see Section 14, Definitions).

This assessment has revealed no evidence of controlled recognized environmental conditions in connection with the property.

8.3 Historical Recognized Environmental Conditions

This section identifies the presence of historical recognized environmental conditions detected through the performance of this Phase I ESA. ASTM E 1527-13 defines a *historical recognized environmental condition* as “*a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls...*” The standard requires that “*before calling past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria*” (see Section 14, Definitions).

This assessment has revealed no evidence of historical recognized environmental conditions in connection with the property.

8.4 De Minimis Conditions

ASTM defines a *de minimis* condition as a “*condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions nor controlled recognized environmental conditions.*” (see Section 14, Definitions).

No *de minimis* conditions were noted in association with this Phase I ESA.

8.5 Other Environmental Items of Note

Asbestos-Containing Building Materials (ACBMs)

Based on the 1960 construction date of the property building, it is likely that ACBMs are present. AGI observed suspect ACBM during the property inspection, including drywall joint tape and compound and 9"x9" floor tile and mastic in the basement, mastic associated with ceramic floor tile in the restrooms, door and window caulk, and thermal system insulation (TSI). An asbestos inspection should be conducted by an Illinois Department of Public Health (IDPH) licensed asbestos building inspector prior to any renovation or demolition of the building, and any identified ACBM should be abated by an IDPH licensed asbestos abatement contractor. Any additional suspect ACBMs encountered during future renovation or demolition of the property building should be tested and abated in accordance with all applicable regulations.

Lead-Based Paint (LBP)

Based on the 1960 construction date of the property building, it is possible that LBP is present. No suspect LBP was observed during AGI's inspection and all paint appeared to be in good condition, but any suspect LBP encountered during future renovation or demolition of the property building should be tested and abated in accordance with all applicable regulations.

No other environmental items of note were identified during the course of this investigation.

9.0 SUMMARY OF RECOMMENDATIONS

Prior to any major renovation or demolition activities, the property should be inspected for lead-based paint (LBP) and asbestos-containing building materials (ACBM) by an Illinois Department of Public Health (IDPH) licensed lead/asbestos building inspector and any identified LBP or ACBM should be abated by an IDPH licensed lead and asbestos abatement contractor.

10.0 DEVIATIONS AND ADDITIONAL SERVICES

The scope-of-services for this investigation included the performance of a Phase I ESA consistent with the requirements of AAI and ASTM. In addition, AGI performed a visual survey for lead-based paint and asbestos containing building materials.

12.0 SIGNATURES

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

Report Date: August 27, 2021

Project No.: 21-285

Property Location: 7 Van Buren Street / 404 South Austin Boulevard
Oak Park, Illinois

Report Prepared for: Oak Park Residence Corporation

"I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Sec. 312.10 of 40 CFR 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312."

Environmental Professional:

Kathleen N. Larsen

Principal Engineer:

Adam M. Moghamis, P.E.

13.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONAL

Ms. Larsen has eleven years of experience in the fields of civil and environmental engineering, including work in the areas of environmental assessment and remediation, asbestos inspections, stormwater management, and geotechnical investigations. At Applied GeoScience, Inc., Ms. Larsen manages the performance of all environmental aspects of projects. She also directs geotechnical investigations and materials testing and inspection contracts.

Ms. Larsen's Phase I Environmental Site Assessment (ESA) experience has included assessments of commercial, municipal, and vacant land for a variety of clients, including private developers and government agencies. She has also performed pre-construction inspections to assess the integrity of roadways, building foundations, and other structures prior to sewer and right-of-way work.

Her Phase II ESA experience has included subsurface investigations, underground tank removal, and screenings for asbestos. She also performs field screening and coordinates laboratory testing of soils for disposal purposes. Ms. Larsen provides cost estimates for these operations and submits documentation and plans for site closure through state-regulated cleanup programs where appropriate.

Ms. Larsen is also responsible for the review of written reports and the coordination of field investigation and abatement activities. She interacts with utility companies as well as local, state, and federal agencies as required to secure appropriate permits for cleanups.

Ms. Larsen's previous experience includes engineering work for a county government. She was responsible for reviewing and updating stormwater permit applications and spill prevention plans, as well as organizing the county's stormwater system and underground storage tank databases.

Education

Bachelor of Science, Civil Engineering with Environmental Engineering Option, University of Wisconsin-Madison, 2010

Registration and Certifications

Engineer In Training (EIT)

American Concrete Institute Field Testing Technician- Grade I

IDOT – Certified PCC Level I

OSHA 40-Hour Hazardous Incident Response Operations Certified

IDPH Licensed Asbestos Building Inspector

14.0 DEFINITIONS AND ACRONYMS

The following table provides an abbreviated list of commonly used terms in the Phase I ESA, as defined in ASTM Standard E1527-13. A complete list of relevant terms may be obtained by review of the ASTM Standard E1527-13.

Term or Acronym	Definition
Activity and use limitations (AULs)	<i>Legal or physical restrictions or limitations on the use of, or access to, a property or facility: (1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, and/or surface water on the property, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls, are intended to prevent adverse impact to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil, soil vapor, groundwater, and/or surface water on the property.</i>
All appropriate inquiry (AAI)	<i>That inquiry constituting all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial and customary practice as defined in CERCLA, 42 USC §9601(35)(B), that will qualify a party to a commercial real estate transaction for one of the threshold criteria for satisfying the Landowner Liability Protections (LLPs) to CERCLA liability, assuming compliance with other elements of the defense.</i>
Business environmental risk	<i>A risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations.</i>
Controlled Recognized Environmental Condition (CREC)	<i>A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority,) with hazardous substances or petroleum products allowed to remain in place subject to the implementation or required controls.</i>
Data Gap	<i>A lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information.</i>
De Minimis Condition	<i>A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions nor controlled recognized environmental conditions.</i>
Engineering controls (EC)	<i>Physical modifications to a site or facility (for example, capping, slurry walls, or point use of water treatment) to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or groundwater on the property. A type of AUL.</i>

Term or Acronym	Definition
Historical Recognized Environmental Condition (HREC)	<i>A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls...</i> The standard requires that “before calling past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria).
Institutional controls (IC)	<i>A legal or administrative restriction (for example, “deed restrictions”, restrictive covenants, easements or zoning) on the use of, or access to, a site or facility to (1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the property or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. A type of AUL.</i>
Key site manager	<i>The person identified by the owner or operator of a property as having good knowledge of the uses and physical characteristics of the property.</i>
Major occupants	<i>Those tenants, subtenants, or other persons or entities each of which uses at least 40% of the leasable area of the property or any anchor tenant when the property is a shopping center.</i>
Practically reviewable	<i>Information that is provided by the source in a manner and in a form that, upon examination, yields information relevant to the property without the need for extraordinary analysis of irrelevant data.</i>
Reasonably ascertainable	<i>Information that is (1) publicly available, (2) obtainable from its source within a reasonable time and cost restraints, and (3) practically reviewable.</i>
Recognized environmental condition (REC)	<i>The presence or likely presence of any hazardous substance or petroleum products in, on, or at a property; (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.</i>
User	<i>The party seeking to use ASTM Practice E1527 to complete an environmental site assessment of the property. A user may include, without limitation, a potential purchaser of property, a potential tenant of property, an owner of property, a lender, or a property manager. The user has specific obligations for completing a successful application of the ASTM Practice as outlined in the Practice.</i>
Vapor encroachment condition (VEC)	<i>The presence or likely presence of vapors in the sub-surface of the target property caused by the release of vapors from contaminated soil or groundwater either on or near the property as identified by Tier 1...or Tier2... procedures. [Defined by ASTM Standard E2600-10, Standard Guide to Vapor Encroachment Screening on Property Involved in Real Estate Transactions]</i>
ACM	<i>Asbestos-Containing Material</i>
AST	<i>Aboveground Storage Tank</i>
CERCLA	<i>Comprehensive Environmental Response, Compensation, and Liability Act of 1980</i>
ESA	<i>Environmental Site Assessment</i>

Term or Acronym	Definition
FOIA	<i>Freedom of Information Act Request</i>
IEPA	<i>Illinois Environmental Protection Agency</i>
LBP	<i>Lead-Based Paint</i>
LUST	<i>Leaking Underground Storage Tank</i>

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Applied Geosciences, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL..... National Priority List
Proposed NPL..... Proposed National Priority List Sites
NPL LIENS..... Federal Superfund Liens

Federal Delisted NPL site list

Delisted NPL..... National Priority List Deletions

Federal CERCLIS list

FEDERAL FACILITY..... Federal Facility Site Information listing
SEMS..... Superfund Enterprise Management System

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF..... RCRA - Treatment, Storage and Disposal

Federal RCRA generators list

RCRA-LQG..... RCRA - Large Quantity Generators
RCRA-SQG..... RCRA - Small Quantity Generators
RCRA-VSQG..... RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

Federal institutional controls / engineering controls registries

LUCIS..... Land Use Control Information System
US ENG CONTROLS..... Engineering Controls Sites List
US INST CONTROLS..... Institutional Controls Sites List

Federal ERNS list

ERNS..... Emergency Response Notification System

State- and tribal - equivalent CERCLIS

IL SSU..... State Sites Unit Listing

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/22/2021 has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

IL UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Illinois State Fire Marshal's STC Facility List.

A review of the IL UST list, as provided by EDR, and dated 04/19/2021 has revealed that there are 2 IL UST sites within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
NORTH WESTERN GAS LI	1001 SOUTH TAYLOR AV	SSW 1/4 - 1/2 (0.311 mi.)	D19	35

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

AUSTIN & HARRISON AM	2 HARRISON ST	S 0 - 1/8 (0.119 mi.)	A5	15

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste Code: D000
Waste Description: Not Defined

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Summary:

Waste Code: D000
Waste Description: Not Defined

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D006
Waste Description: CADMIUM

Waste Code: D008
Waste Description: LEAD

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL

BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F006
Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code: F007
Waste Description: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

Waste Code: F008
Waste Description: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F009
Waste Description: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F010
Waste Description: QUENCHING BATH RESIDUES FROM OIL BATHS FROM METAL HEAT TREATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: F011
Waste Description: SPENT CYANIDE SOLUTIONS FROM SLAT BATH POT CLEANING FROM METAL HEAT TREATING OPERATIONS.

Waste Code: F012
Waste Description: QUENCHING WASTEWATER TREATMENT SLUDGES FROM METAL HEAT TREATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Waste Code: P029
Waste Description: COPPER CYANIDE (OR) COPPER CYANIDE CU(CN)

Waste Code: P106
Waste Description: SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)

Waste Code: P121
Waste Description: ZINC CYANIDE (OR) ZINC CYANIDE ZN(CN)₂

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/27/2021	Source: EPA
Date Data Arrived at EDR: 05/03/2021	Telephone: N/A
Date Made Active in Reports: 05/19/2021	Last EDR Contact: 08/04/2021
Number of Days to Update: 16	Next Scheduled EDR Contact: 10/11/2021
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2021	Source: EPA
Date Data Arrived at EDR: 05/03/2021	Telephone: N/A
Date Made Active in Reports: 05/19/2021	Last EDR Contact: 08/04/2021
Number of Days to Update: 16	Next Scheduled EDR Contact: 10/11/2021
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/27/2021
Date Data Arrived at EDR: 05/03/2021

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 02/22/2021
Date Data Arrived at EDR: 03/30/2021
Date Made Active in Reports: 06/17/2021
Number of Days to Update: 79

Next Scheduled EDR Contact: 10/11/2021
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/27/2021
Date Data Arrived at EDR: 05/03/2021
Date Made Active in Reports: 05/19/2021
Number of Days to Update: 16

Next Scheduled EDR Contact: 10/25/2021
Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 04/27/2021	Source: EPA
Date Data Arrived at EDR: 05/03/2021	Telephone: 800-424-9346
Date Made Active in Reports: 05/19/2021	Last EDR Contact: 08/04/2021
Number of Days to Update: 16	Next Scheduled EDR Contact: 10/25/2021
	Data Release Frequency: Quarterly

Federal RCRA CORRACTS facilities list

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 03/22/2021	Source: EPA
Date Data Arrived at EDR: 03/23/2021	Telephone: 800-424-9346
Date Made Active in Reports: 05/19/2021	Last EDR Contact: 06/21/2021
Number of Days to Update: 57	Next Scheduled EDR Contact: 10/04/2021
	Data Release Frequency: Quarterly

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/22/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/23/2021	Telephone: 312-886-6186
Date Made Active in Reports: 05/19/2021	Last EDR Contact: 06/21/2021
Number of Days to Update: 57	Next Scheduled EDR Contact: 10/04/2021
	Data Release Frequency: Quarterly

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HWAR: Hazard Waste Annual Report

Each year, Illinois hazardous-waste generators tell the Illinois EPA the amounts and kinds of hazardous waste they produced during the previous year. Generators indicate by code the types of wastes produced and the steps they took to manage these wastes. If some or all of these wastes were sent to commercial treatment, storage, and disposal facilities (TSDFs), that information and the identity of each receiving facility also are submitted. Illinois TSDFs likewise report the types and quantities of wastes received from in-state and out-of-state generators; they also report the procedures they used to manage these wastes.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

RGA LUST: Recovered Government Archive Leaking Underground Storage Tank

The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Illinois Environmental Protection Agency in Illinois.

Date of Government Version: N/A	Source: Illinois Environmental Protection Agency
Date Data Arrived at EDR: 07/01/2013	Telephone: N/A
Date Made Active in Reports: 12/30/2013	Last EDR Contact: 06/01/2012
Number of Days to Update: 182	Next Scheduled EDR Contact: N/A
	Data Release Frequency: Varies

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 03/24/2021	Source: Department of Energy & Environmental Protection
Date Data Arrived at EDR: 05/11/2021	Telephone: 860-424-3375

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Version Date:	2012
Northwest Map:	5680695 RIVER FOREST, IL
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

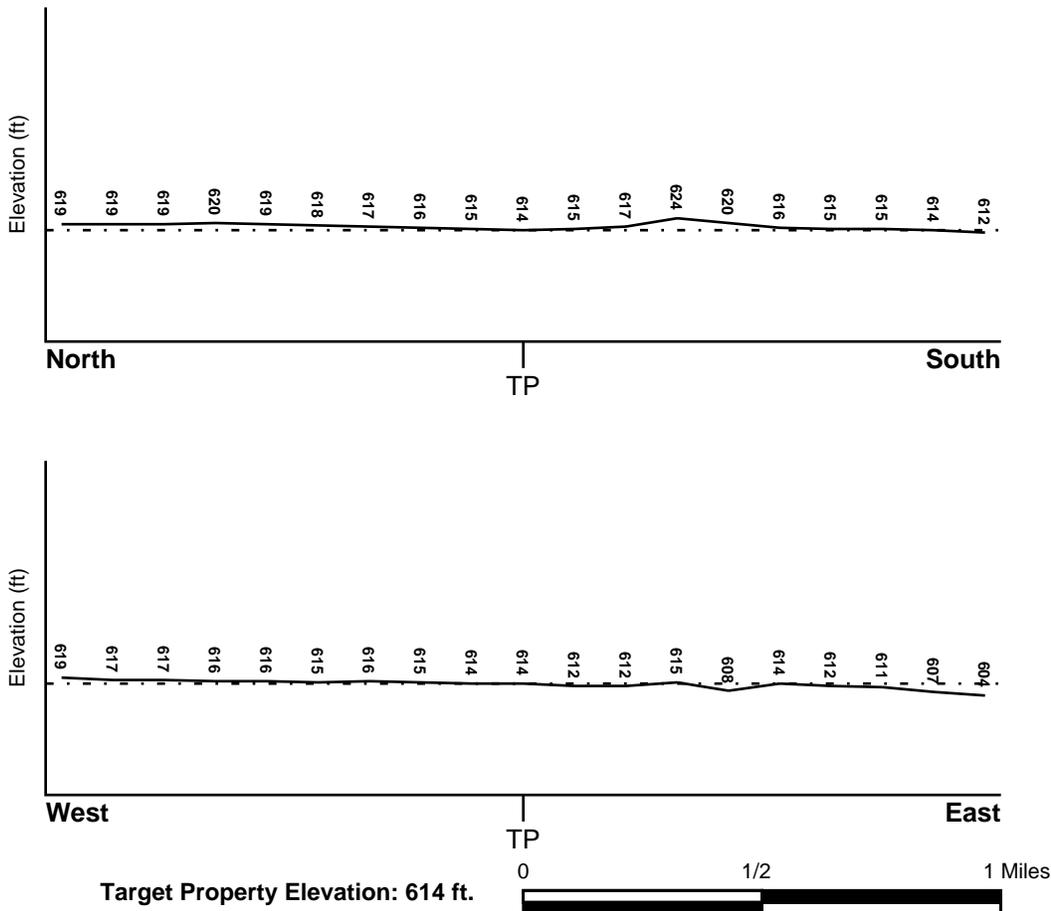

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
NO PANEL ID	FEMA Q3 Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>

1700740065B	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
BERWYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>

5G	1/2 - 1 Mile SE	ESE

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Paleozoic
System: Silurian
Series: Middle Silurian (Niagoaran)

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBANLAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Bedrock Max: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	60 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
fine sandy loam
loam
fine sand

Surficial Soil Types: silt loam
fine sandy loam
loam
fine sand

Shallow Soil Types: sandy loam

Deeper Soil Types: silt loam
sand
loamy sand
loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Illinois State Geological Survey

Telephone: 217-333-4747

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

Dear Requester:

Thank you for writing to the Village of Oak Park ("Village") with your request for records pursuant to the Illinois Freedom of Information Act, 5 ILCS 140/1 et seq.

Public Records Requested:

Please provide any information of an environmental nature for the property at 7 West Van Buren Street, Oak Park, including but not limited to asbestos inspection or abatement reports, underground or aboveground storage tank records, hazardous materials reports, spill reports, or similar.

The Village has no records related to your inquiry. If you have further questions or inquiries, please contact us at the email address below.

Fire Department does not have any records of underground tanks at requested address.

Sincerely,

Fire

Dear Kathleen Larsen,

We have received your request for information under the Illinois Freedom of Information Act. Listed below is a summary of what we received in your online request.

Please do not reply to this email. If you have questions about your request please call (217) 558-5101.

Request Summary

Received 8/22/2021 12:32:14 PM

Reference Id(s)

Date Range 01/01/1940 - 08/22/2021

Request Narrative Please provide any information of an environmental nature for the property at 7 West Van Buren Street, Oak Park, IL including but not limited to asbestos inspection or abatement reports, underground or aboveground storage tank records, hazardous materials reports, spill reports, or similar. [Note- this is a clarification on a previous request also submitted 8/22/21 which did not include the city name]

Completed User and Owner Questionnaires

Applied GeoScience, Inc.

Geotechnical, Environmental & Materials Engineering

PHASE I ESA USER QUESTIONNAIRE

INTRODUCTION: In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfield Revitalization Act of 2001, the User must provide the information requested in Section E below (if available) to the Environmental Professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

A. PROJECT/SITE INFORMATION

Client Name: Mr. Jack Lovell

Site Name: 7 Van Buren Street

Site Address: 7 Van Buren Street

City: Oak Park

County: Cook

State: IL

B. CONTACT INFORMATION

Name	Company	Telephone #	Designation
Jack Lovell	Oak Park Residence Corporation	(708)386-6061 ext. 110	Current Owner
			Past Owner
Derek Darter	Oak Park Residence Corporation	(708) 386-6061 ext. 104	Property Mgr.

C. PROPERTY USE & SPECIFICATIONS

1. Legal description/plat plan/boundary survey available? Yes No Already provided

2. Current Property Status: Vacant Occupied Improved Unimproved

D. PREVIOUS INVESTIGATIONS

Does the User have copies of any of the following reports related to the site? Check all that apply and provide copies.

- Phase I Environmental Assessment
- Surveys or investigations for:
 - Asbestos-containing materials
 - Lead Paint
 - Lead In Drinking Water
 - Radon
- Wetlands delineation or study
- Indoor Air Quality investigation
- Underground Storage Tank investigation, removal report, closure report
- Geotechnical studies
- Soil or groundwater testing
- Other -specify type _____

E. LEGAL/ADMINISTRATIVE PROCEEDINGS

1. Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).

Are you aware of any environmental cleanup liens against the site that are filed or recorded under federal, tribal, state, or local laws?

Yes No

Unknown - Authorize environmental professional to conduct title review and liens search.

If Yes or No, explain source of information:

2. Activity and land use limitations (AULs) that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls, that are in place at the site and/or have been filed or recorded in a registry under federal tribal, state or local law?

Yes No

Unknown - Authorize environmental professional to conduct title review and liens search.

If Yes or No, explain source of information:

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

As the User of this ESA do you have any specialized knowledge or experience related to the site or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes No

If Yes, describe:

4. Relationship of the purchase price to the fair market value of the site if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this property reasonably reflect the fair market value of the site? Yes No

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the site?

Yes No

If Yes, explain:

5. Commonly known or reasonably ascertainable information about the site (40 CFR 312.30).

Are you aware of commonly known or reasonably ascertainable information about the site that would help the environmental professional to identify conditions indicative of releases or threatened releases?

For example, as User,

(a) Do you know the past uses of the site?

Yes No

If Yes, explain:

(b) Do you know of specific chemicals that are present or once were present at the site?

Yes No

If Yes, explain:

(c) Do you know of spills or other chemical releases that have taken place at the site?

Yes No

If Yes, explain:

(d) Do you know of any environmental cleanups that have taken place at the site?

Yes No

If Yes, explain:

F. ADDITIONAL INFORMATION

1. Why is the Phase I ESA being performed?

The Phase I is being performed because the property is slated for demolition and re-development into a new six story, 45-unit apartment building.

2. Identify all parties, with addresses, who will rely on the Phase I report. (To whom should the report be addressed?)

David Pope and Jack Lovell
Oak Park Residence Corporation
21 South Blvd.
Oak Park, IL 60302

3. Are any changes to the ASTM scope of services for the Phase I required (special requirements)?

No.

4. Are there any special terms or conditions that the environmental professional must be aware of?

No.

5. What type of property transaction (sale, purchase, exchange, refinance, etc.) is involved?

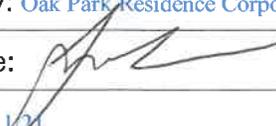

Re-development.

C. PROPERTY USE & SPECIFICATIONS

Single-Family Residential

Vacant or Undeveloped Land

Multi-Family Res. # Units: 12

Agricultural *specify type:*

Commercial Office

Industrial *specify type:*

Commercial Retail

Other *specify type:*

1. Legal description/plat plan/boundary survey available? Yes No

2. Current Property Status: Vacant Occupied Improved Unimproved

3. Total Property Size: 9,286

4. Original Construction Date: 1959

5. Total # of Buildings: One

6. Was Construction Phased? Yes No

7. Total Sq. Ft. of Buildings: 6,812

8. Dates of Renovation/Phases: N/A

9. Does site have an undeveloped area ≥ 1 acre? Yes No

10. Any bodies of water on or immediately adjacent to the site? Yes No If yes, describe:

11. Potable water source at the Site? On-site well Utility- specify name: _____

12. Wastewater discharge at the Site? Septic Tank/Drain field Sanitary Sewer Other _____

13. Natural gas source at the Site? Utility -specify name: Nicor No

14. Electrical source at the Site? Utility -specify name: ComEd No

15. Existing building plans available at the Site? Yes No Unknown Already provided

D. PREVIOUS INVESTIGATIONS

Have any previous environmentally-related investigations, assessments or other studies been performed at the site? Check all that apply.

- Phase I Environmental Assessment
- Surveys or investigations for:
 - Asbestos-containing materials
 - Lead Paint
 - Lead In Drinking Water
 - Radon
- Wetlands delineation or study
- Indoor Air Quality investigation
- Underground Storage Tank investigation, removal report, closure report
- Geotechnical studies
- Soil or groundwater testing
- Other -*specify type*

If Yes to any of the above, please provide copies.

E. OTHER HELPFUL DOCUMENTS

Are you aware of any of the following additional documents regarding the site? _____
Check all that apply.

- Permits, such as solid waste or hazardous waste disposal permits, wastewater discharge permits, NPDES permits
- Hazardous waste generator notices, reports and manifests
- Registrations or removal permits for underground storage tanks
- Material Safety Data Sheets
- Community Right-to-Know Plans
- Safety plans, preparedness and prevention plans; spill prevention, countermeasure, and control plans

If so, are these available for our review? _____

F. LEGAL/ADMINISTRATIVE PROCEEDINGS

1. Have there been any notices, citations, or other correspondence from any governmental agency regarding past or current **violations of environmental laws** at the site?

Yes No Unknown

If Yes, please explain:

2. Have there been any pending, threatened, or past **litigation or administrative proceedings** relevant to hazardous substances or petroleum products in, on, or from the site?

Yes No Unknown

If Yes, please explain:

3. Do you have knowledge of any **environmental liens** recorded against the site?

Yes No Unknown

If Yes, describe:

4. According to the ASTM Standard, in a transaction involving the purchase of a parcel of commercial real estate, if a user has actual knowledge that the purchase price of the site is significantly less than the purchase price of comparable properties, the user should try to identify an explanation for the lower price and to make a written record of such explanation.

Do you have knowledge of a valuation reduction related to environmental issues?

Yes No

If Yes, describe:

G. ON-SITE ENVIRONMENTAL CONDITIONS

Are you aware of any of the following environmental conditions, **EITHER CURRENT OR FORMER**, at the site?

Environmental Condition/Issue	Response	Notes On "Yes" Responses
Aboveground Storage Tanks	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	We are unaware as to whether or not there was or is any of asbestos or lead based paint in the building.
Underground Storage Tanks	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Hazardous/Toxic Substances	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Polychlorinated Biphenyls (PCBs), PCB-containing equipment	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Chemical Spills/Releases	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Dump Areas/Landfills	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Waste Treatment Systems	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Wastewater Discharges	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Air Stacks/Vents/Odors	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Indoor Air Quality Complaints	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Floor Drains/Sumps	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
Pits, Ponds, Lagoons	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Stained Soil/Vegetation Impact	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Pesticide/Herbicide Use	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Stored Chemicals	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Electrical Transformers	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Elevators	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Dry cleaning operations	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Asbestos-containing materials	<input type="checkbox"/> Yes <input type="checkbox"/> No	
Lead-based paint	<input type="checkbox"/> Yes <input type="checkbox"/> No	
Lead in drinking water	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Elevated radon levels	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Wetlands	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Flooding	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Water wells	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Oil/gas wells or pipelines	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Hydraulic Lifts	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	

H. OFF-SITE ENVIRONMENTAL CONCERNS

1. On adjoining properties are there any CURRENT OR FORMER:

Gasoline Stations? Yes No Dry cleaners? Yes No

2. Are you aware of any other environmental conditions or concerns on adjacent or nearby properties? No.

I. ADDITIONAL INFORMATION

1. When was the site purchased?
2004.

2. Who was the prior owner?
N/A.

3. Who is the current owner?
Oak Park Residence Corporation.

4. What buildings have been constructed on the site since its original development?
None.

5. What Parcel Identification Numbers (PINs) are associated with the site?
16-17-131-013-0000

Mr. Jack Lovell

Oak Park Residence Corporation

21 South Boulevard
Oak Park, Illinois 60302

RE: Asbestos Inspection Report

7 Van Buren Street / 404 South Austin Boulevard
Oak Park, Illinois
AGI Project No. 20-213

Dear Mr. Lovell:

Per your request, Applied GeoScience, Inc. performed an inspection for asbestos-containing building materials (ACBMs) at the above-referenced building on September 13, 2021 by a Licensed State of Illinois Asbestos Building Inspector. AGI submitted samples of suspect ACBMs to STAT Analysis Corporation in Chicago, Illinois for analysis by Polarized Light Microscopy (PLM). Analytical results are provided in the following table.

Sample I.D.	Sample Location	Sample Description	Asbestos Content
S-1	Basement	9 X 9 Brown Floor Tile	ND
S-1M	Basement	Floor Tile Mastic	Chrysotile 1-5%
S-2	Basement	9 X 9 Brown Floor Tile	ND
S-2M	Basement	Floor Tile Mastic	ND
S-3	Basement	9 X 9 Brown Floor Tile	ND
S-3M	Basement	Floor Tile Mastic	Chrysotile 1-5%
S-4	Unit 1	Drywall	ND
S-5	Unit 1	Floor Tile Mastic	Chrysotile 1-5%
S-6	Unit 1	14 X 14 Floor Tile	ND
S-6M	Unit 1	Floor Tile Mastic	ND
S-7	Unit 2	Drywall	ND
S-8	Unit 2	Floor Tile Mastic	Chrysotile 1-5%
S-9	Unit 3	9 X 9 Brown Floor Tile	Chrysotile 5-10%
S-9M	Unit 3	Floor Tile Mastic	Chrysotile 1-5%
S-10	Unit 3	Floor Tile and Mastic	Chrysotile 1-5%
S-11	Unit 4	Floor Tile Mastic	Chrysotile 1-5%
S-12	Unit 5	Floor Tile Mastic	Chrysotile 1-5%
S-13	Unit 6	Floor Tile Mastic	Chrysotile 1-5%
S-14	Unit 7	Floor Tile Mastic	Chrysotile 1-5%
S-15	Unit 8	Floor Tile Mastic	Chrysotile 1-5%
S-16	Unit 9	Floor Tile Mastic	Chrysotile 1-5%
S-17	Unit 10	Floor Tile Mastic	Chrysotile 1-5%
S-18	Unit 11	Floor Tile Mastic	Chrysotile 1-5%
S-19	Unit 12	Floor Tile Mastic	Chrysotile 1-5%

Conclusion

Based on the test results, the floor tile and floor tile mastic in the basement, first floor units and second floor units contains

asbestos. Asbestos-containing building materials require removal by a licensed asbestos abatement contractor in accordance with all applicable asbestos regulations, prior to any renovation or demolition work. AGI would be pleased to provide a proposal for the abatement work, if desired. If any additional suspect materials are encountered during future renovation or demolition activities, AGI recommends collection and analysis of the materials for asbestos content prior to disturbance.

Limitations and Service Constraints

Professional opinions presented in this report are based on information made available to AGI either by review of data provided by others or data gained by inspection personnel. AGI affirms that data gathered and presented in this report was collected in an appropriate manner in accordance with generally accepted methods and practices. Conditions described in this report were observed at the time of investigation, unless otherwise stated. Exploratory demolition, to the extent feasible, was performed in all permanent ceilings, walls, or other structures.

Inspection personnel made reasonable effort to locate and sample suspect materials within the designated space. However, for any facility, the existence of unique or concealed ACBMs and debris is a possibility. AGI does not warrant, guarantee, or profess to be able to locate or identify all ACBMs in a facility.

The intent of this report is to be used in planning for renovation activity. If additional suspect ACBMs are encountered during demolition related activities, these materials should be tested by a licensed Building Inspector and if confirmed to be ACBM, removed and disposed of in accordance with all local, state, and federal regulations prior to disturbance.

AGI analyzed only the substances, condition, and locations described in the report at the time indicated. AGI retains the right to revise this report if new information is later discovered or made available. The report must be presented in its entirety.

The laboratory analytical results, chain-of-custody documentation, and a sample location diagram are provided as attachments to this letter. Please do not hesitate to contact us if you require any additional information.

Sincerely,

APPLIED GEOSCIENCE, INC.

Re: Geotechnical Investigation Report
Proposed 6-Story Building
7 Van Buren Street
Oak Park, Illinois
Pioneer Project No. 20-0024-151

Dear Mr. Pope:

Pioneer Engineering & Environmental Services, LLC (Pioneer) was contracted to conduct a geotechnical subsurface investigation for the proposed 6-story residential building to be located at 7 Van Buren Street in Oak Park, Illinois. The geotechnical investigation was performed in general accordance with Pioneer Proposal No. 15677, dated December 13, 2019. The scope of the investigation included drilling, sampling, and laboratory testing of soil obtained in five borings in support of the proposed foundation design of the project.

Project Overview

The Project Site is rectangular-shaped parcel with maximum dimensions of 75.5 feet by 122.6 feet. The site is developed with a 2-story brick building with a landscaped area to the east and paved parking areas at the west and southwest portions of the site. The Site is bordered by a parking area to the north, S. Austin Boulevard to the east, a 3-story building with a garden-level basement to the south, and a public alley to the west.

Current plans include demolishing the existing 2-story building and constructing a 6-story residential building with slab-on-grade first floor. The building will encompass the entire site and will consist of one floor of precast concrete podium and 5 floors of wood construction above. The maximum anticipated column load (service) is 550 kips and the maximum anticipated wall load (service) is 15 kips per lineal foot.

Site Historical Use

A cursory review of aerial photos were made to help determine if the past history of the site, such as previous structures, may provide insight into the existing site subsurface conditions. Aerial photos from 1938 to 2019 were reviewed to help determine where foundations or floor slabs from previous site use might be located.

According to the aerial photos, by 1938, the Project Site appeared undeveloped and the south adjacent property had been developed with the existing 3-story building. By 1963, the Project Site had been developed with the existing 2-story building and associated parking areas. The Site has remained unchanged since, bringing the site to its current configuration.

Subsurface Investigation

Five soil borings (Borings B-1 through B-5) were performed within the Project Site, reference the attached Boring Location Diagram, Figure 1. The borings were located in the field using conventional taping

procedures. The borings were advanced with an ATV-mounted Geoprobe 7822DT drill rig using 3 ¼-inch diameter hollow stem augers (HSAs). All borings are located within the footprint of the proposed building. Borings B-1 and B-3 were advanced to a depth of 50 feet below existing grade and were located in the northwest and southeast corners of the site, respectively. Borings B-2, B-4, and B-5 were advanced to a depth of 35 feet below existing grade and are located at the southwest, south-central, and northeast portions of the site, respectively.

Representative soil samples were obtained from each sampling interval using the split barrel sampling procedure performed in accordance with ASTM Standard D 1586, "Method for Penetration Test and Split Barrel Sampling of Soils". In the split barrel sampling procedure, a 140-pound hammer falls 30 inches and drives a two-inch outer diameter split barrel sampler 18 inches into the soil. The number of blows required to drive the barrel sampler the final 12 inches is the Standard Penetration Resistance (SPT N-value) for that interval. This test result indicates the soil's relative density and comparative consistency, and provides a basis for estimating the relative strength and compressibility of soil. Representative soil samples were obtained at 2.5-foot intervals to a depth of 15 feet and at 5-foot intervals thereafter.

The soil samples obtained from each interval were logged in the field according to their predominant geological characteristics. The field logs were subsequently used to prepare the final boring logs that are included as an attachment to this report. Soil samples obtained from the drilling operations were identified by boring number and sampling depth, and brought to Pioneer's laboratory for further examination and testing. The borings were backfilled with soil cuttings upon completion to avoid a hazard to the public.

The soil samples were analyzed for physical soil parameters including moisture content and unconfined compressive strength. In addition, the soil was further classified in accordance with the Unified Soil Classification System. A natural moisture content test was performed for each sampling interval and/or stratum in accordance with ASTM Standard D 2216. Additional estimated unconfined compressive strength values for cohesive soil samples were obtained by using a spring-loaded pocket penetrometer and/or Rimac machine. The laboratory test data is included on the attached Boring Logs.

Subsurface Conditions

The following generalized soil profile was encountered in the borings.

- Bituminous Concrete Pavement over Gravel Base. The surface cover in Borings B-1, B-2, and B-4 consists of 2 to 2.5 inches of Bituminous Concrete Pavement over 3 to 4 inches of Gravel Base Course Fill.
- Black Silty Clay Topsoil. In Borings B-3 and B-5, the surface cover consists of a 1-foot thick layer of Black Sandy Clay Topsoil.
- Very Tough Olive-Gray Silty Clay Transition Soil. The surficial materials are underlain by a deposit of very tough Olive-Gray Silty Clay Transition Soil which extends to a depth of approximately 2.0 feet below existing grade. The soil is a transition between Topsoil (previously removed from the Site) and the underlying parent material. The deposit possesses unconfined compressive strengths ranging from 2.1 to 2.8 tons per square foot (tsf) and moisture contents ranging from 20.8 to 23.4 percent.
- Very Tough to Hard Brown and Gray Mottled Silty Clay. In Borings B-3 through B-5, the Olive-Gray Silty Clay Transition Soil is underlain by a deposit of very tough to hard Brown and Gray Mottled Silty Clay which extends to approximate depths of 4.0 to 8.0 feet below existing grade. The deposit possesses unconfined compressive strengths ranging from 2.2 to 5.3 tsf and moisture contents ranging from 20.5 to 27.7 percent.

- Very Tough to Hard Brown and Gray Silty Clay. In Borings B-1, B-2, B-4, and B-5, the Olive-Gray Silty Clay Transition Soil and/or Brown and Gray Mottled Silty Clay are underlain by a deposit of very tough to hard Brown and Gray Silty Clay which extends to an approximate depth of 8.0 feet below existing grade. The deposit possesses unconfined compressive strengths ranging from 2.4 to 5.3 tsf and moisture contents ranging from 14.1 to 23.0 percent.
- Very Tough to Hard Gray Silty Clay. In all borings, the Brown and Gray Silty Clay is underlain by a deposit of very tough to hard Gray Silty Clay which extends to boring termination in Borings B-2, B-4 and B-5, or to a depth of 43 feet below existing grade in Borings B-1 and B-3. The deposit possesses unconfined compressive strengths ranging from 2.1 to 6.7 tsf and moisture contents ranging from 12.4 to 21.4 percent.
- Hard Gray Silty Clay to Clayey Silt. Borings B-1 and B-3 were terminated in a deposit of hard Gray Silty Clay to Clayey Silt at a depth of 50 feet below existing grade. The deposit possesses SPT N-values ranging from 36 to 79 blows per foot (bpf), unconfined compressive strengths ranging from 4.0 to 7.3 tsf, and moisture contents ranging from 11.5 to 12.0 percent.

Groundwater Conditions. Groundwater was encountered while drilling in Borings B-1 and B-3 at a depth of 40 feet below existing grade. Groundwater was not encountered in any of the other borings while drilling. A temporary piezometer was installed at Boring B-5. Approximately 3 days after installation, the groundwater level was 34 feet below existing grade.

Glacial soils in the Midwest typically oxidize from gray to brown above the level at which the soils remain saturated. The long-term groundwater level is often interpreted to be near this zone of color change. This color change was recorded upon encountering Gray Silty Clay at a depth of 8 feet below ground surface. It is recommended that a long-term groundwater level of 8 feet below existing ground surface should be used for design purposes.

Seasonal and yearly fluctuations in the water table can be expected due to variations in precipitation, evaporation, and surface runoff. Also, it is likely that pockets of perched groundwater may occur after precipitation events.

The subsurface description is of a generalized nature to highlight the major subsurface stratification features and material characteristics. The boring logs included in the appendix should be reviewed for specific information at individual boring locations. These records include soil descriptions, stratifications, penetration resistance, locations of the samples and laboratory test data. The stratifications shown on the boring logs represent the conditions only at the actual boring locations. Variations may occur and should be expected between boring locations. The stratifications represent the approximate boundary between subsurface materials and the actual transition may be gradual.

Conclusions and Recommendations

Site Preparation

Demolition. Current development plans include the demolition of the existing structures and parking area. Concrete from the existing buildings or previously existing structures floor slabs and foundation walls/footings should be removed from the site or crushed and stockpiled for reuse in project earthwork. If properly sized (per IDOT CA-1, CA-6 or CA-7 gradation) the crushed concrete can be used as structural backfill.

Existing footings and foundation walls should be removed below proposed footings, but can generally be left in place unless they are in direct conflict with the new building components or if they are located within 2 feet below the design subgrade for pavements or floor slabs. Based on the current design, it appears that a

portion of the north and south exterior foundation walls and footings of the existing building will need to be removed in their entirety to construct the new development.

Foundation System

Adjacent Buildings. The design of the proposed frost-depth foundation could be affected by the type and depth of footings of the existing structure that occupies the site, and those of the adjacent structures.

The proposed building is bordered on the south by a 3-story building with a garden-level basement. As such, the proposed building's south foundations will likely need to approximate the adjacent buildings' footing elevations to avoid any lateral stress on the adjacent basement walls or foundation system. This will depend on both the lateral and vertical separation between the proposed and adjacent foundations.

New foundations in the above areas should be reviewed to determine what measures, if any, will be required to design and construct the new footings. Test pits should be used as necessary to determine whether old foundations remain in place and the depth of the foundations.

Design Criteria. The proposed building is planned as a 6-story residential building with slab-on-grade first floor. The building will encompass the entire site and will consist of one floor of precast concrete podium and 5 floors of wood construction above. The maximum anticipated column load (service) is 550 kips and the maximum anticipated wall load (service) is 15 kips per lineal foot. For discussion purposes, it is assumed that the design bottom of frost-depth footings will be approximately 4 feet below sidewalk grade. Footings along the south building line may be 2 to 3 feet lower (6 to 7 feet below existing grade) to match the footing level of the adjacent building's basement. Interior columns footings are typically founded at a depth of approximately 2 feet below design top-of-floor slab.

Footing Support Soils. The following soil deposits were considered for support of the foundation system.

- The upper soil profile of Gravel Base Course Fill, Topsoil, and Olive-Gray Silty Clay Transition Soil possesses poor engineering properties and will not provide positive support for the foundation loads. The poor quality soils were encountered to an approximate depth of 2 feet below sidewalk grade.
- The underlying native, very tough to hard Brown and Gray Mottled Silty Clay encountered in Borings B-3, B-4, and B-5 possesses fair soil properties. Most zones possess adequate engineering properties for support of the building; however, other zones may possess moderately high moisture content (27.7 percent in Boring B-4). Small footing undercuts (as discussed below) may be required for frost-depth footings when soil with a higher moisture content is encountered.
- The underlying native very tough to hard Brown to Gray Silty Clay possesses adequate properties for support of the proposed building.

Footing Design Criteria. As noted above, it is probable that footings will be founded at depths ranging from 2 feet to 7 feet below existing grade, depending on location within the building. The following provides design criteria for each condition.

- Frost-depth footings founded at approximately 4 feet below sidewalk grade will be supported on the native, very tough to hard Brown and Gray Silty Clay or a pad of Structural Fill. These footings can be dimensioned using a net allowable bearing capacity of 4,000 psf. The net allowable bearing pressure refers to that pressure which may be imposed on the foundation soils in excess of the final minimum surrounding overburden pressure.

- Exterior footings along the south building line may be located on the Brown and Gray Silty Clay at depths up to 7 feet below existing grade. These footings can also be dimensioned using a net allowable bearing capacity of 4,000 psf.
- Most interior footings should be stepped below the Olive-Gray Silty Clay Transition Soil and founded in the underlying Brown and Gray Silty Clay. These footings can also be dimensioned using a net allowable bearing capacity of 4,000 psf.

Pioneer anticipates that properly designed and constructed footings supported upon the recommended, inspected, and approved Brown and Gray Silty Clay, Brown and Gray Mottled Silty Clay, or a pad of Structural Fill should experience a maximum total settlement on the order of 1-inch should be expected. Differential settlements ranging from $\frac{1}{2}$ to $\frac{2}{3}$ the total settlement are possible across the building area due to variations in subsurface conditions and foundation loadings.

The following should be used where unsuitable soil is encountered below the design footing subgrade and an undercut-replacement scheme is used for footing support. Any unsuitable soils such as Fill or Organic Silty Clay that are encountered at the design footing subgrade should be removed to the depth encountered and replaced with Structural Fill. Typical Structural Fill, such as 3-inch crushed limestone or concrete chocked with 1-inch nominal granular material (IDOT CA-7 gradation), should be placed in 18-inch lifts and compacted by use of a vibratory compactor or through the force of a backhoe's bucket to seat the stone. The width of the excavation should extend at least one foot horizontally beyond the perimeter of the footing on all sides for each one foot of vertical undercut below the bottom of the footing, thus providing for adequate lateral distribution of the foundation stresses.

An additional discussion of the placement and compaction of Structural Fill is included in the Earthwork Controls section of this report.

Additional Footing Design Criteria. All footings should be founded a minimum of 3.5 feet below final exterior grade to eliminate the effects of frost on footing behavior. Interior column footings below a heated building should be founded at least 2 feet below the final floor slab level. In order to prevent local bearing failure, isolated column footings should have a minimum lateral dimension of 24-inches and continuous footings should have a minimum width of 18-inches. If the building is constructed during winter months or if the footings will likely be subjected to freezing temperatures after construction is completed, then the footings should be protected from freezing.

In order to limit the effects of differential movement that may occur due to variations in the character of the supporting soils and variations in seasonal moisture contents, Pioneer recommends that the continuous footings be suitably reinforced to make them as rigid as practical.

Floor Slabs

First Floor Slab-on-Grade. Floor slabs constructed near existing surface grade will be located on the Gravel Fill or Olive-Gray Silty Clay. The Fill is loose and has variable engineering properties. While unsuitable for support of foundations, floor slabs are commonly constructed over Fill. However, minor settlement can be expected due to the variable nature of the Fill. The following procedures should be used for support and to help minimize settlement of the at-grade floor slabs.

Floor Slab Support Procedures. After the bituminous concrete pavement and topsoil are removed from the Site and the floor slab areas are excavated to the design subgrade, the exposed soil should be visually inspected for unsuitable soils. Any Fill containing a high content of topsoil, organic material, or wood debris should be removed to the depth encountered. Although not expected, Fill containing a high content of concrete or brick debris with large voids between pieces should be removed and recompacted, if possible,

to minimize voids. Zones of Fill that are primarily sand should be compacted to attain stability. Old footings or foundation walls should be removed to a depth of 2 feet below slab design subgrade elevation.

All unsuitable soils or old foundations should be replaced with compacted structural fill. Structural fill should be an approved granular soil equivalent to an IDOT CA-6 or CA-7 gradation. Engineered fill should be placed and compacted in lifts with a maximum lift thickness of 8 inches. Each lift of IDOT CA-7 open graded granular soil should be compacted to a minimum of 75% of the relative density in accordance with ASTM Standards D 4253 and D 4254. If IDOT CA-6 granular material is used, the soil should be compacted to a minimum of 95% of the maximum density per ASTM D 1557 (Modified Proctor).

The above partial-depth removal and replacement scheme is provided as an economical method to minimize slab settlement and cracking. Because all of the Fill is not being removed, it is possible that zones of voids or loose Fill will still remain and could lead to future settlement. If no risk of floor slab settlement is desired, it is recommended that the existing Fill be removed in its entirety and replaced with structural fill.

If the floor slab subgrade is prepared in the winter during freezing conditions, any exposed subgrade soils should be protected from freezing, typically with blankets. Engineered fill should not be placed on frozen soils.

Assuming the floor slab subgrade is prepared as recommended, a modulus of subgrade reaction of 75 pounds per cubic inch (pci) should be used.

The floor slab should be supported by a minimum 6-inch thick granular base course of IDOT CA-6 or CA-7 crushed stone or equivalent. The base course will not only facilitate fine grading of the slab subgrade surface, but will also serve as a capillary cutoff layer, which would minimize the migration of moisture through the floor slab. The use of a vapor barrier beneath the floor slab is also recommended. A simple polyethylene membrane can generally be installed at a minimal cost, further minimizing the migration of moisture through the floor slab, which may damage sensitive floor coverings. Floor slabs-on-grade should be isolated from the foundation system and contain the proper number of isolation and contraction joints to maintain the integrity of the slab should minor differential movements occur.

Seismic Design Criteria

Based on the ASCE 7-10, Pioneer recommends the following seismic design criteria for the determination of maximum considered earthquake and design spectral response accelerations.

From Table 20.1-1, the soil profile of the project site is generally characterized as Site Class Profile D ("Stiff Soil") based on the undrained shear strengths which are typically greater than 1,000 psf. While there are some strata of soils where the shear strength is less than 1,000 psf, the average shear strength is greater due to the very stiff and occasionally dense soil layers. Based upon the Maximum Considered Earthquake Ground Motion maps, the maximum considered earthquake spectral response acceleration at short periods (S_s) and at 1-second periods (S_1) are 0.140 g and 0.063 g, respectively, based upon a Site Class Profile D. The following additional parameters are recommended by the general IBC procedure:

- Seismic Use Group Category - Category III
- Seismic Design Category (SDC) - Category B
- Adjusted maximum considered earthquake spectral response acceleration parameters
 $S_{MS} = 0.224$
 $S_{M1} = 0.150$
- For calculating the design spectral response accelerations utilize:
 $S_{DS} = 0.149$
 $S_{D1} = 0.100$

Lateral Earth Pressure

Temporary shoring may be required, during the construction of the foundations, depending on the proximity to existing structures, utilities, and property lines. Temporary shoring and permanent below grade structures, should be designed in accordance with the recommendations in this section.

The following table presents recommended values of earth pressure and friction coefficients based on our experience with soils in the area. Equivalent fluid pressures are frequently used for the calculation of lateral earth pressures for the "at-rest", "active" and "passive" conditions, and are also provided. Earth pressures are influenced by the structural design of the temporary shoring, methods of construction and the strength of the subgrade. The "at-rest" condition (K_0) assumes no wall rotation and is usually applicable for basement walls. The recommended design lateral earth pressures do not include a factor of safety and do not provide for possible hydrostatic pressure on the walls. The temporary shoring should also be adequately braced to resist the lateral earth pressures and any short-time construction loads in addition to permanent surcharge loads.

If temporary shoring is not free to rotate or deflect at the top, possibly due to tiebacks or walers, Pioneer recommends designing temporary shoring for the "at-rest" lateral earth pressure condition using K_0 . Temporary shoring that is permitted to rotate and deflect at the top can be designed for the active lateral earth pressure condition using K_a .

Table 1: Estimated Lateral Pressure and Friction Parameters

EARTH PRESSURE CONDITIONS	COEFFICIENT FOR BACKFILL TYPE	EQUIVALENT FLUID PRESSURE (pcf)	DRAINED FRICTION ANGLE (degrees)	UNIT WEIGHT (pcf)
Active (K_a)	Granular - 0.27 Lean Clay - 0.36	Granular - 32 Lean Clay - 45	Granular - 35 Lean Clay - 28	Granular - 120 Lean Clay - 125
At-Rest (K_0)	Granular - 0.43 Lean Clay - 0.48	Granular - 52 Lean Clay - 60	Granular - 35 Lean Clay - 28	Granular - 120 Lean Clay - 125
Passive (K_p)	Granular - 3.69 Lean Clay - 2.77	Granular - 443 Lean Clay - 346	Granular - 35 Lean Clay - 28	Granular - 120 Lean Clay - 125
FRICTION COEFFICIENTS				
Concrete placed on Granular Fill			Tan δ = 0.45	
Concrete placed on Clay			Tan δ = 0.30	

Notes: The Equivalent Fluid Pressures in the table above are based on a moist, not submerged state.

Horizontal loads acting on a foundation wall are resisted by friction along the foundation base and by passive pressure against the footing face, which is perpendicular to the line of applied force. The passive pressures on the toe of the foundation wall can be computed by assuming a passive pressure coefficient from the table above for granular backfill on the consideration that some friction angle will develop between the backfill and the outer face of the structure. Passive resistance should be considered only for soils below the 3.5-foot frost depth.

Excavation Stability

Precautions should also be taken so that the foundation systems of existing structures and utilities are not undermined. If temporary shoring will not be used to brace the sides of the excavation for the foundation, Pioneer recommends sloping the sides of the excavation in accordance with local ordinances and OSHA regulations. Materials removed from the excavation should not be stockpiled immediately adjacent to the excavation, since this surcharge load may cause a sudden collapse of the slope.

Earthwork Controls

Structural Fill should meet the following properties for use as floor slab support soils.

Table 2 - Structural Fill Material Requirements

Fill Type	USCS Classification	Acceptable Location for Placement
Cohesive	CL, CL-ML	Below floor slabs and pavement
Granular	GW, GP, GM, GC SW, SP, SM, SC	Below floor slabs, pavement and foundations
Unsuitable	CH, MH, ML, OL, OH, PT	Non-structural areas

Structural Fill should be placed and compacted in accordance with the following requirements.

Table 3 - Fill Placement and Compaction Requirements

Description	Requirement
Fill Lift Thickness	10 inches loose measurement when sheepfoot or steel drum rollers are used 6 inches loose measurement when jumping jacks or plate compactors are used
Minimum Compaction Requirement Below Foundations and Slabs-on-Grade and Upper 12 Inches of Paved Areas	95% of the maximum dry density per ASTM D-1557 (Modified Proctor)
Minimum Compaction Requirement Below 12 Inches of Paved Areas and Landscaped Areas	90% of the maximum dry density per ASTM D 1557 (Modified Proctor)
Moisture Content of Cohesive Soils	-2% to +3 % of optimum moisture content per ASTM D 1557
Open-graded Aggregate including IDOT CA-1 and CA-7 Gradations	Compact in 8-inch thick lifts loose measure to achieve stability through particle interlock

All subgrade surfaces should be protected during construction from deterioration or softening caused by frost or ponding of water. Water should not be allowed to stand in the excavations for a sustained period of time. All soft, loose, or disturbed soils should be removed to competent support materials. If the floor slab or pavement subgrade is prepared in the winter, exposed subgrade soils should be protected from freezing. Structural fill should not be placed on frozen soils.

Report Limitations

This geotechnical investigation report has been prepared to aid in the evaluation and design of this project. As a result, this report has provided generalized guidelines to be considered during the actual design and construction phases of the proposed building. The information provided in this report should be evaluated by, and the site improvements should be designed by a licensed structural engineer or architect. Should deviations from the noted subsurface conditions be encountered during construction, this information should be brought to Pioneer's attention. Pioneer would welcome the opportunity to provide field construction services for this project. The analysis and recommendations submitted in this report are based upon the data obtained from the soil borings performed at the locations indicated on the location diagram. It should be understood that this location was approximate, since the boring locations were not surveyed. This report does not reflect any variations that may occur between and beyond these borings.

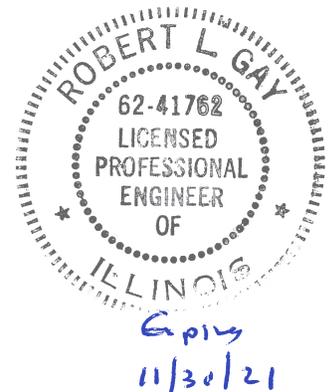

This report has been prepared for the sole use of the client identified in the report and cannot be relied upon by other persons or entities without Pioneer's permission. The observations and conclusions contained herein are limited by the scope and intent of the work mutually agreed upon by the client and Pioneer and the work actually performed. There are no warranties, implied or expressed, concerning the integrity of the areas and/or mediums not analytically tested.

Pioneer appreciates the opportunity to provide our services for this project. Please feel free to contact us if you have any questions or concerns.

Respectfully Submitted,

NOTE: DUAL SYMBOLS ARE USED TO INDICATE BORDERLINE SOIL CLASSIFICATIONS

MAJOR DIVISIONS			SYMBOLS		TYPICAL DESCRIPTIONS
			GRAPH	LETTER	
COARSE GRAINED SOILS	GRAVEL AND GRAVELLY SOILS	CLEAN GRAVELS (LITTLE OR NO FINES)		GW	WELL-GRADED GRAVELS, GRAVEL - SAND MIXTURES, LITTLE OR NO FINES
		GRAVELS WITH FINES		GP	POORLY-GRADED GRAVELS, GRAVEL - SAND MIXTURES, LITTLE OR NO FINES
		(APPRECIABLE AMOUNT OF FINES)		GM	SILTY GRAVELS, GRAVEL - SAND - SILT MIXTURES
	SAND AND SANDY SOILS	CLEAN SANDS (LITTLE OR NO FINES)		SW	WELL-GRADED SANDS, GRAVELLY SANDS, LITTLE OR NO FINES
		SANDS WITH FINES		SP	POORLY-GRADED SANDS, GRAVELLY SAND, LITTLE OR NO FINES
		(APPRECIABLE AMOUNT OF FINES)		SM	SILTY SANDS, SAND - SILT MIXTURES
FINE GRAINED SOILS	SILTS AND CLAYS	LIQUID LIMIT LESS THAN 50		ML	INORGANIC SILTS AND VERY FINE SANDS, ROCK FLOUR, SILTY OR CLAYEY FINE SANDS OR CLAYEY SILTS WITH SLIGHT PLASTICITY
				CL	INORGANIC CLAYS OF LOW TO MEDIUM PLASTICITY, GRAVELLY CLAYS, SANDY CLAYS, SILTY CLAYS, LEAN CLAYS
				OL	ORGANIC SILTS AND ORGANIC SILTY CLAYS OF LOW PLASTICITY
	SILTS AND CLAYS	LIQUID LIMIT GREATER THAN 50		MH	INORGANIC SILTS, MICACEOUS OR DIATOMACEOUS FINE SAND OR SILTY SOILS
				CH	INORGANIC CLAYS OF HIGH PLASTICITY
				OH	ORGANIC CLAYS OF MEDIUM TO HIGH PLASTICITY, ORGANIC SILTS
HIGHLY ORGANIC SOILS			PT	PEAT, HUMUS, SWAMP SOILS WITH HIGH ORGANIC CONTENTS	

Drilling and Sampling Abbreviations:

Sample/Drilling:

SS- Split Spoon Sampler
 ST- Shelby Tube Sampler
 RC- Rock Core: NX, BX, AX
 HSA- Hollow Stem Auger

In-Situ Tests:

SPT-Standard Penetration Test
 PMT-Pressuremeter Test
 VS-Vane Shear
 DCP-Dynamic Cone Penetrometer
 Q_p-Estimated Unconfined Compressive Strength using Pocket Penetrometer
 Q_u-Estimated Unconfined Compressive Strength using Rimac Tester

Correlation of Penetration Resistances to Soil Properties:

Relative Density- Sands, Silts

More than 50% retained onto the No. 200 sieve

Consistency of Cohesive Soils

More than 50% passing the No. 200 sieve

<u>SPT-N Value</u>	<u>Relative Density</u>	<u>Unconfined Compressive Strength Q_p, tsf</u>	<u>Consistency</u>
0-3	Very Loose	under 0.25	Very Soft
4-9	Loose	0.25-0.49	Soft
10-29	Medium Dense	0.50-0.99	Stiff
30-49	Dense	1.00-1.99	Tough
50-80	Very Dense	2.00-3.99	Very Tough
		4.00-8.00	Hard
		over 8.00	Very Hard

Gradation Description and Terminology:

<u>Major Component of Sample</u>	<u>Size Range</u>	<u>Description of Minor Components</u>	<u>Percent of Dry Weight</u>
Boulders	Over 12 inches	Trace	1-9
Cobbles	12 inches to 3 inches	Little	10-19
Gravel	3 inches to No. 4 sieve	Some	20-34
<i>Coarse</i>	<i>3 inches to ¾ inches</i>	And	35-50
<i>Fine</i>	<i>¾ inches to No. 4 sieve</i>		
Sand	No. 4 sieve to No. 200 sieve		
<i>Coarse</i>	<i>No. 4 sieve to No. 10 sieve</i>		
<i>Medium</i>	<i>No. 10 sieve to No. 40 sieve</i>		
<i>Fine</i>	<i>No. 40 sieve to No. 200 sieve</i>		
Silt/Clay	Passing No. 200 sieve
