

**Village of Oak Park  
Capital Improvement Program  
2019-2023**

Project: **Fire Station 2 Overhead Door Replacement**

Priority Code: **A**

Category: **Building Improvements**

**Description:**

This project involves replacing the existing overhead doors at the north fire station with a new, more effective overhead door system.

**Justification:**

The existing overhead doors were replaced in 1985. The existing doors operate slowly and create a clearance issue for fire trucks leaving and entering the building. New doors that operate quickly would improve the response time of the fire department on emergency calls and be beneficial to the Village through increased productivity and safety.

**Current Status:**

This is a new project. Some preliminary work has been done to identify the cost and type of doors that would be most suitable.
