GPRS appreciates the opportunity to provide this proposal. I encourage you to visit our website (www.gprsinc.com) and contact any of the numerous references listed. Our insurance certificate and W-9 can also be downloaded [here](#). Please feel free to contact me if you have any questions, or if you need additional information.

SCOPE OF WORK

We understand the scope of work to be to scan for unknown vaults under sections of sidewalks along Oak Park Ave between Ontario St and Pleasant street. Vaults may be from basements attached to existing or removed buildings or from utility vault/access points. Sidewalks are approximately 8 x 12 ft wide depending on section. Both sides of the street are to be scanned. The approximate length of the Street scape area is 3500 linear ft. Passes will be made at two to three-foot passes. The proposed locations should be laid out, marked, and cleared of obstructions prior to our arrival in order to avoid additional charges. Our findings will be marked directly onto the surface using permanent marker, crayon, tape, or other methods depending on the site conditions. We will label known conduits/utilities as such by detecting changes in patterns, depths, etc. However, these items can look identical to rebar or wire mesh so all markings should be avoided. GPR cannot determine the diameters of reinforcing or conduits so avoid all markings by at least 1" or more whenever possible. Please visit www.simspec.org for an overview of our industry-leading best practices that will be applied to this project.

EQUIPMENT

- **1600 MHz GPR Antenna.** The antenna is approximately 6"x9" and rolls over the surface. The antenna needs a reasonably smooth, unobstructed surface for scanning so we would not be able to scan within 3" of obstructions such as walls and metal tracks unless they are removed prior to our work. The data is displayed on a screen during the scanning and marked on the surface in real time. GPR works by sending pulses of energy into a material and recording the strength and the time required for the return of the reflected signal. Reflections are produced when the energy pulses enter into a material with different electrical properties from the material it left. The strength of the reflection is determined by the contrast in signal speed between the two materials. The total depth achieved can be as much as 18" or more with this antenna but can vary widely depending on the conductivity of the materials and other factors such as the spacing of the reinforcing. ***No harmful radiation is emitted and the work can be performed at any time with people in close proximity.*** For more information, please visit: [Link](#)
- **2000 MHz GPR Antenna.** The antenna is only approximately 4"x3.5" and rolls over the surface. The antenna needs a reasonably smooth, unobstructed surface for scanning so we would not be able to scan within 1.75" of obstructions such as walls and metal tracks unless they are removed prior to our work. The data is displayed on a screen during the scanning and marked on the surface in real time. GPR works by sending pulses of energy into a material and recording the strength and the time required for the return of the reflected signal. Reflections are produced when the energy pulses enter into a material with different electrical properties from the material it left. The strength of the reflection is determined by the contrast in signal speed between the two materials. The total depth achieved can be as much as 18" or more with this antenna but can vary widely depending on the conductivity of the materials and other factors such as the spacing of the reinforcing. ***No harmful radiation is emitted and the work can be performed at any time with people in close proximity.*** For more information, please visit: [Link](#)
- **Electromagnetic Pipe Locator.** The EM locator can passively detect the electromagnetic fields from live AC power or radio signals travelling along some conductive utilities. It can also be used in conjunction with a transmitter to connect directly to accessible, metallic pipes, risers, or tracer wires. A current is sent through the pipe or tracer wire at a specific frequency and the resulting EM field can then be detected by the receiver. For more information, please visit: [Link](#)

PROJECT COSTS

SERVICE	SCOPE	PRICE	
SCANNING/FIELD MARKINGS	Described on Page 1	\$3,200	
MOBILIZATION	Included at no charge	\$0	
TOTAL		*\$3,200	
OPTIONAL SERVICES (INITIAL IF DESIRED)			
WRITTEN REPORT	Basic report of findings with photos and example data.	Initial ____	\$300
CAD DRAWING	Findings will be drafted in AutoCAD. The type of output is TBD.	Initial ____	TBD

* This price assumes that we will be given access to perform the work during normal weekday business hours (6am-5pm). Some slabs may not be completely penetrable from the top only and would need to be scanned from both top and bottom and should be considered an unforeseen circumstance that would incur additional time onsite and charges. Ladders or manlifts for accessing wall or ceiling locations is the responsibility of the client. Roofing material should be removed prior to our arrival. All of our technicians have OSHA-10 safety training or greater. Site-specific safety training is not included in this quote. Please notify us if this project requires additional safety training.

TERMS & CONDITIONS

1. Customer agrees to meet and perform all requirements described in this document and has fully read and understands all items listed within this document.
2. Customer acknowledges it understands that our results are based upon the quality of the data retrieved which is determined by a variety of factors, including, but not limited to, the limitations listed in the "Equipment" section of this document. These limitations are inherent to all locating equipment. The decision to proceed with drilling, excavation or any destructive methods is left entirely up to the customer.
3. GPRS is not liable for inaccurate data reporting or for any other reason, and customer agrees to release and indemnify GPRS and its owners and agents from all losses and damages from all alleged negligence and/or contract claims by customer or any third party. These terms and conditions supersede any other previous terms and conditions, or representation, either oral or written.
4. If GPRS provides maps or CAD drawings, please note that the map is not survey quality. These are representations of GPRS' utility findings performed on a previous date. The GPRS scan performed was of limited scope and utilities outside this scope are not shown.
5. GPRS does not conduct an investigation, analysis, or interpretation of soil composition, soil conditions, or geological or geophysical information, Customer acknowledges it understands that we are merely reporting retrieved data and that we do NOT provide professional geophysical, geological, engineering, or land surveying services. Customer should contact a professional in those fields if such services are needed.
6. Payment is due upon receipt of invoice.
7. If for some reason the technician arrives on site and the work is cancelled there will be a charge of \$500.00 per requested technician.
