

RainReady Oak Park 2017 - 2019

Marcella Bondie Keenan | Center for Neighborhood Technology

Hierarchy for Stormwater Management

AVOID IT

Avoid stormwater runoff by protecting open space

SINK IT

Catch and sink runoff by adding porous paving, trees, and rain gardens to urban areas

HOLD IT

Hold runoff temporarily through detention basins in parks, golf courses, reservoirs, etc.

SEND IT

Send runoff to treatment facilities using pipes, tunnels, and ditches

Community Benefits of Green Infrastructure

Benefit	Reduces Stormwater Runoff				Increases Available Water Supply	Increases Groundwater Recharge	Reduces Salt Use	Reduces Energy Use	Improves Air Quality	Reduces Atmospheric CO ₂	Reduces Urban Heat Island	Improves Community Livability					Improves Habitat	Cultivates Public Education Opportunities
	Reduces Water Treatment Needs	Improves Water Quality	Reduces Grey Infrastructure Needs	Reduces Flooding								Improves Aesthetics	Increases Recreational Opportunity	Reduces Noise Pollution	Improves Community Cohesion	Urban Agriculture

Evaluation

Program Design

Program Objectives

- Reduce runoff to sewer system
- Reduce residential drainage problems

Eligible Measures

- Rain gardens + Bioswales
- Depaving + Permeable pavement
- Cisterns + Dry wells
- Other approved green infrastructure

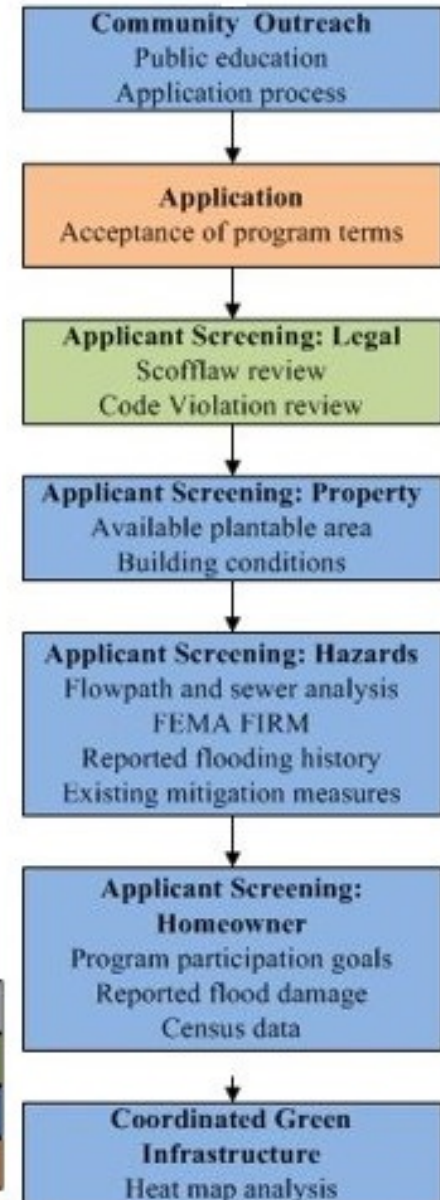

Program Financing

- 50% match up to \$1,300

Participant Selection

- Scofflaw review
- Applicant prioritization

Task Lead
Municipality
CNT
Homeowner

Outreach + Education

The 2019 program opened with a lengthy waitlist, as a result of the previous year's outreach. In order to minimize program wait times, minimal promotion was conducted in 2019.

In lieu of general outreach, CNT contacted waitlisted applicants via phone calls and direct emails. Interested applicants were invited to an application review meeting. During this phone call, applicants discussed their RainReady goals and constraints, learned about the benefits and limitations of green infrastructure, and were reminded of the program requirements. Applicants who confirmed an intent to meet program requirements were enrolled in the program.

All applicants were also provided with on-demand resources such as the My RainReady diagnostic tool, fact sheets, and videos.

Outreach + Education

Your Location

Map Satellite

Linden Ave, Oak Park, IL 60302, USA ✕

Year Built: 1925
Land Square Feet: 6250
FEMA flood risk: Minimal Risk

Do your neighborhood streets flood when it rains?

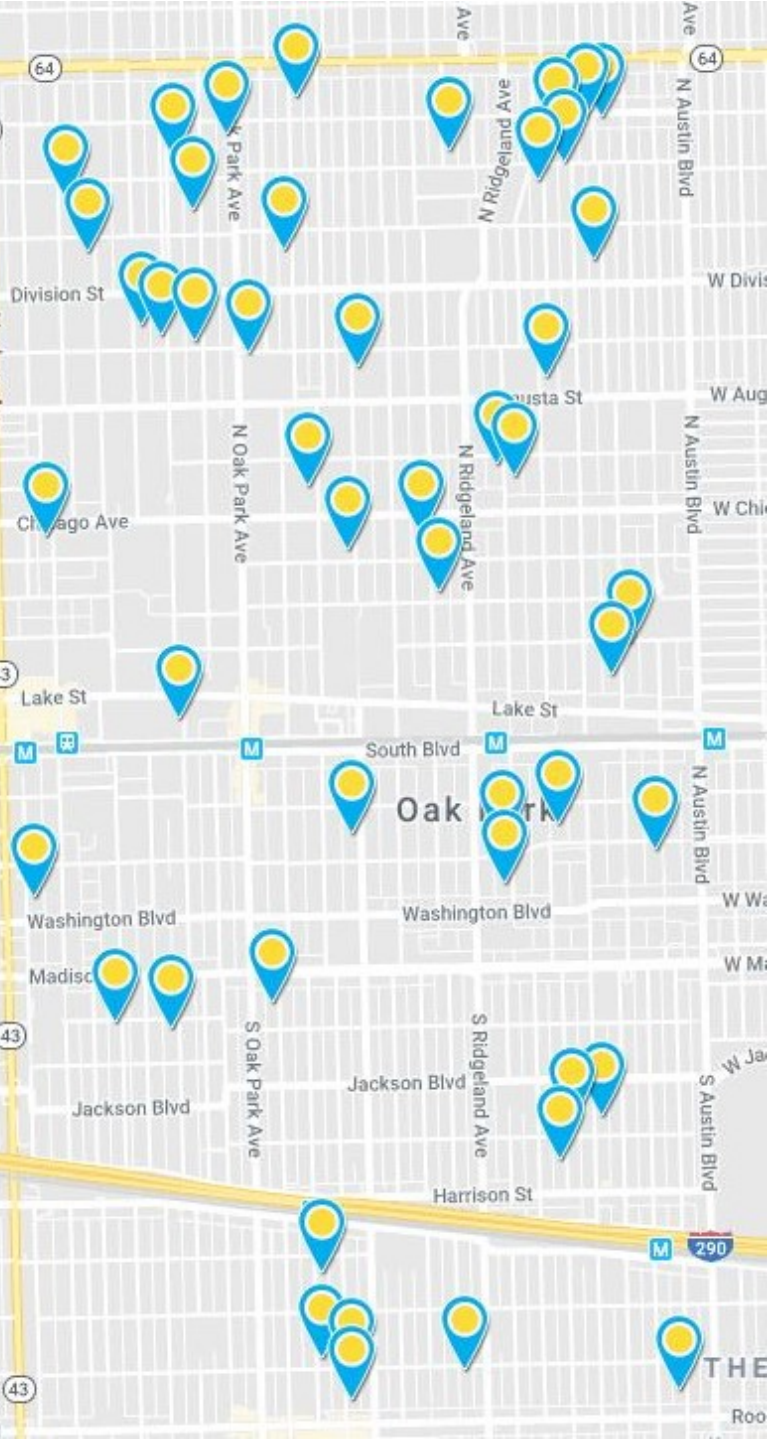

☐ Yes ☐ No ☒ I don't know

Tip: Take a look at your street when it next rains, and take photographs. Look to see if it is flooding in areas where there is a street sewer grate. This might help identify the cause of the street flooding. The sewer grate could be clogged with litter or leaves. If the sewer grates are clear, but street flooding still occurs, your municipality may have installed restrictor valves in the street's sewer inlet. The purpose of these devices is to slow the flow of water entering the sewer system. This reduces the risk of sewage and stormwater runoff backing up into your basement.

Online Flood Education

My RainReady

- Parcel-specific data
- Guided flood risk questionnaire
- Flood protection tips for homeowners
- Customized recommendations report based on questionnaire answers
- Freely available to all
- Web: myrainready.cnt.org

Program Results: 2017 - 2019

Outreach + Education

- 2 Community Meetings (2016; 2018); approx. 50 attendees
- Tabling at Oak Park Earth Fest (2018; 2019)
- Village newsletter & social media; CNT newsletter & social media
- Media mentions: Chicago Tribune; Around Oak Park
- Individual outreach to 175 applicants

Program Enrollment

- 221 Completed applications
- 69 Completed home assessments

Completed Installations

- 36 Rain Gardens or Bioswales
- 4 Dry Wells
- 6 Depavings

Stormwater Management

Estimated **724,000** gallons of rain
diverted from Oak Park's sewer system

Investment

LEVERAGE ACHIEVED

1 : 3.25

Average Project Cost: \$4,021

Average Grant: \$1,238

Total Private Investment: \$156,830

Performance

**0% Reported
Flooding** after
construction

Recommendations

- Re-initiate resident outreach activities, including promotion through the Village newsletter and social media.
- Conduct contractor outreach + create a public database of landscape installers interested in bidding on RainReady Oak Park work.
- Begin application review and enrollment invitation for waitlisted applicants as early as possible during the program year. Do not wait until the close of the annual application deadline.
- Continue to conduct scofflaw review on a rolling basis, after the invited applicant submits all grant agreement documents.
- Conduct outreach to program participants to re-enroll who received an assessment but did not complete an eligible project before the close of annual deadline. Establish earlier milestone deadlines for projects initiated during a previous year.
- Continue enhanced application review activities, including contacting applicants for a verbal review of grant requirements and interview with RainReady assessor.
- Update grant reimbursement forms to include a photo of completed work.

About CNT

Innovations laboratory for urban sustainability

Our goal is to advance urban sustainability and shared prosperity through initiatives in water, transportation, and climate. We are a “think and do tank” that offers programs, policy, and research.
